Handling Precautions for MOS ICs

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential. (The ICs should be stored in that manner until mounted on the circuit board.)

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
 - Use a paper clip modified by soldering in a wire braid insert.

Make sure that there is no solder on the inside.

Make sure that all the pins are in contact with the wire braid (all the pins will then be at the same potential.).

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

Fig. H

5. Method of Mounting

Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B- voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

Example:

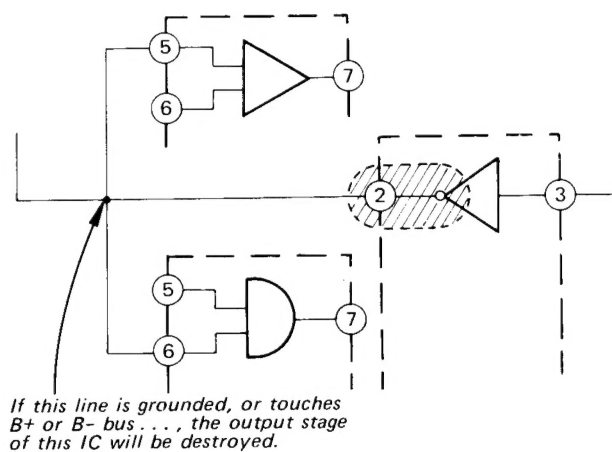

Fig. I

SPECIFICATIONS

ST-78S/78L

System FM stereo, FM/AM superheterodyne tuner
Quartz-locked digital synthesizer system

General

Dimensions Approx. 215 × 55 × 240 mm (w/h/d)
(8¹/₂ × 2¹/₈ × 9³/₈ inches)
incl. projecting parts and controls

Weight Approx. 1.1 kg (2 lbs. 7 oz) net

FM tuner section

Tuning range 87.5-108 MHz
Antenna terminals 75 ohm unbalanced
Intermediate frequency 10.7 MHz
Usable sensitivity 2.3 μV, S/N = 30 dB/75 ohm
Signal-to-noise ratio 78 dB (mono), 70 dB (stereo)
Harmonic distortion 0.2% (mono), 0.5% (stereo) at 1 KHz
Separation Better than 40 dB at 1 kHz
Selectivity 55 dB (400 kHz)

MW/LW tuner section (for ST-78L) AEP, UK model

		MW	LW
Tuning range		522—1,602 kHz	153—344 kHz
Antenna		Built-in ferrite bar antenna, External antenna terminal	
Intermediate frequency		450 kHz	450 kHz
Usable sensitivity	built-in antenna	250 μV/m (1,000 kHz)	500 μV/m (230 kHz)
	external antenna	100 μV (1,000 kHz)	150 μV (230 kHz)
Signal-to-noise ratio (50 mV/m)		52 dB	52 dB
Harmonic distortion (50 mV/m, 400 Hz)		0.3%	0.3%
Selectivity		30 dB (9 kHz)	40 dB (9 kHz)

SW/MW tuner section (for ST-78S) E model

		SW 1	SW 2	MW
Tuning range		3.2 – 7.3 MHz	9.5 – 21.75 MHz	522 – 1,602 kHz (at 9 kHz step) 530 – 1,610 kHz (at 10 kHz step)
Antenna		External antenna terminal		Built-in ferrite bar antenna, External antenna terminal
Intermediate frequency		450 kHz		450 kHz
Usable sensitivity	built-in antenna	—	—	250 μV/m (1,000 kHz)
	external antenna	23 μV (5 MHz)	30 μV (15 MHz)	100 μV (1,000 kHz)
Signal-to-noise ratio		50 dB (5 mV)		52 dB (50 mV/m)
Harmonic distortion		0.3% (5 mV, 400 Hz)		0.3% (50 mV/m, 400 Hz)
Selectivity		30 dB (9 kHz)		30 dB (9 kHz)

Weight	Approx. 2.7 kg (6 lbs) net per unit

General

Power consumption	AEP, E model: 65 watts UK model: 220 watts
Dimensions	Approx. 535 × 320 × 240 mm (w/h/d) (21¼ × 12¾ × 9½ inches) incl. projecting parts and controls
Weight	Approx. 15.1 kg (33 lbs 5 oz) net Approx. 16.5 kg (36 lbs 7 oz) in shipping carton

Caution on UK model

Important

The wires in the mains lead are coloured in accordance with the following code:

Blue: Neutral
Brown: Live

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:

The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.

The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

FEATURES

The Sony FH-7 is a compact high-density component system consisting of an FM stereo/FM-AM tuner, a high quality cassette deck, and integrated amplifier. You can take it anywhere so that you can enjoy a variety of program sources—broadcast programs, taped programs, etc., anytime you like.

The FH-7's matched components are the equal of fine separate components and have the following features:

- Three different power sources: house current using supplied AC power supply unit, batteries and 12 V car battery using the optional DC power supply unit (EBP-78).
- Newly developed flat connecting cords which enable you to connect each component quickly and easily.
- The connectable carrying handle makes the FH-7 carryable as a small suit case.

Amplifier section

- CD/AUX jack for duplicating a tape with an external tape recorder and phono input jacks for listening to records.
- Five frequency band equalizer to compose the source sound to your liking.

Tuner section

- The quartz-locked digital synthesizer system with a sophisticated Phase Locked Loop (PLL) circuit allows extremely precise tuning of FM and MW/LW or SW stations with an electronic digital readout on the frequency display.
- Built-in telescopic antenna and external antenna terminals.
- The PLL (Phase Locked Loop) multiplex circuit assures stable FM reception

Cassette deck section

- The cassette deck can use the metal tapes, providing wider dynamic range and extended frequency response.
- Auto-reverse function for changing the tape direction automatically in the playback mode. You don't have to turn the cassette over to play the other side.
- Automatic Music Sensor (AMS) allows easy playback of the selection being played and easy skipping to the next selection.
- The new automatic recording system sets the recording level automatically.
- The record muting function allows you to eliminate material you do not want to record, such as commercials, and to make a blank space between selections.
- The Dolby NR (noise reduction) system reduces tape hiss and assures high quality recording and playback.

AC power supply section

- Permits headphones to be connected. Their volume is adjustable.
- This section supplies power to the tuner, amplifier and tape deck.

MODEL IDENTIFICATIONS

(TA-78 & SS-78 have no differences by the model.)

- This label is sticked on TC-78.

SECTION 1 OUTLINE

FUNCTION OF CONTROLS

Tuner ST-78L/78S

(The photo shows the ST-78S tuner.)

① Frequency display

Permits reading the received frequency at a glance from the figures.

② STEREO indicator

This indicator will light when an FM stereo program of sufficient signal strength is tuned in.

③ TUNED indicator

Lights up when a signal is tuned in accurately.

④ METER BAND indicator (for ST-78S)

Lights up to show the receiving frequency is in an SW meter band.

⑤ BAND selector

Selects the desired band.

ST-78L: FM, MW or LW.

ST-78S: FM, MW, SW1 or SW2.

⑥ TUNING buttons

Press either the "+" or "-" button to change the frequency.

Press the "-" button to go to a lower frequency and the "+" button to go to a higher. To change the frequency rapidly, press the "FAST" button while pressing "+" or "-" button.

⑦ Telescopic antenna

Used for FM or SW (only for ST-78S) reception.

Amplifier TA-78
⑧ CD/AUX jack

This stereo phone jack allows you to quickly and easily connect a tape recorder for playback. Press PHONO switch of the FUNCTION selectors.

⑨ Graphic equalizer controls

Slide downwards or upwards to equalize the reproduced sound (TAPE, PHONO or TUNER).

⑩ PEAK POWER LEVEL meters

These meters show the output level of the power amplifier.

⑪ BALANCE control lever

This controls the balance of the left and right channel output level. Normally set the control to the center position.

⑫ FUNCTION selectors

Press the desired program source among tape, tuner, record player or the signal from the CD/AUX jack.

PHONO: For disc programs connected to PHONO inputs or the auxiliary programs connected to the CD/AUX jack. Disconnect the phone plug connected to the CD/AUX jack when reproducing disc programs.

TUNER: For off-the-air programs.

TAPE: For taped programs.

⑬ VOLUME control

This controls the overall output level.

Cassette deck TC-78
⑭ Tape type indicators

The type of the tape being used is automatically detected by the automatic tape selector system and the corresponding indicator lights.

⑮ Cassette holder
⑯ Tape direction indicators

During playback or recording, one of the indicators illuminates to show the direction of the tape transport.

⑰ Function buttons

It is possible to switch directly from one mode to another.

► (forward) button: Press this button to play the tape back the front side of the cassette. The tape is transported to the right.

►► (fast-forward) button: Press this button to advance the tape rapidly to the right.

● (record) button: Press this button together with the ► button to start recording. The indicator will illuminate.

■ (stop) button: To stop the tape, press this button.

|| (pause) button: Press this button to stop the tape for a moment during recording and play back of the front side of the cassette. To restart, press the button again. This button is also used to release the record mode. (This button does not operate during the reverse mode).

○ (record muting) button: Press this button to eliminate unwanted material and to insert a blank space during recording.

◀ (reverse) button: Press this button to play the back side of the cassette.

◀◀ (fast-reverse) button: Press this button to advance the tape rapidly to the left.

⑱ LEVEL METER

These meters show the input level during recording and recorded levels during playback.

⑲ DOLBY NR switch

To record with the Dolby NR* (Noise Reduction) process, depress this switch. To record without the Dolby NR process, press again and release this switch.

When playing back, set this switch to the same position used in recording.

*"Dolby" and the double-D symbol are trade marks of the Dolby Laboratories Licensing Corporation. Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

⑳ TAPE COUNTER and reset button

The tape counter provides a numerical reference point while recording which can be used to index a recorded cassette. To reset to zero, press the reset button.

㉑ (eject) button

Press this button to open the cassette holder.

㉒ ISS (Interference suppress switch) (on the rear)

If interference is encountered while recording, MW or LW program, slide the switch to 2 or 3 position depending on which best reduces the noise. Normally set the switch to 1 position.

AC power supply unit AC-78
㉓ HEADPHONES jack

Accepts any headphones. The headphone volume can be adjusted with the volume control.

㉔ POWER switch

Press to turn on the powers of amplifier, tuner and cassette deck. To turn them off, press it again.

CONNECTIONS

POWER CABLE AND SIGNAL CABLE CONNECTION

Notes

- The connector covers are connected to the male connectors at the factory to protect the connector. Remove the connector covers before connecting the flat cables.
- Turn the POWER switch off when connecting or disconnecting the connector to avoid damaging the speaker.
- Be sure to insert the female connector firmly until it clicks into the male connector. Loose connections may cause hum and noise.

See illust **D**.

To disconnect the cable

To disconnect the cable, pull the connector out. Never pull the cable itself.

See illust **E**.

Do not connect the cable this way.

See illust **F**.

OUTDOOR ANTENNA AND PHONO JACKS CONNECTION

75 ohm coaxial cable connection

The tuner accepts 75 ohm coaxial cable. It is free from external interference, reduces noise pickup, and is the ideal transmission line for most FM installations.

MW and LW antenna connection (LW for the ST-78L)

In most areas, the built-in ferrite-bar antenna will provide satisfactory reception. In difficult reception areas, it may be necessary to connect a length of insulated wire 5 - 15 meters (20 - 50 feet) long to the MW/LW ANTENNA terminal (for the ST-78L) or SW/MW ANTENNA terminal (for the ST-78S). Extend this out of doors if possible, keeping the greater portion horizontal.

SW antenna connection (for the ST-78S)

The built-in telescopic antenna will provide satisfactory reception. In difficult reception areas, it may be necessary to connect the SW antenna wire AN-60 to the SW/MW ANTENNA terminal and extend it as high as possible keeping from touching other material or trees. Keep the wire far away from high voltage transmission lines and noisy electrical machinery.

Ground connection [⏏]

When an outdoor antenna is installed, a direct ground is recommended for lightning protection. The use of a lightning arrestor is recommended for any outdoor antenna.

SPEAKER SYSTEM CONNECTION

Connect the supplied speaker cords to the input terminals of the speaker and the speaker terminals of the AC power supply unit, i.e., the right speaker to the R terminals and the left speaker to the L terminals, with correct speaker phasing (correct \oplus and \ominus connections).

To shorten the speaker cord, wind the excessive cord on these hooks.

To hang on a wall

Note on the supplied feet for the speaker

Attach the supplied feet for the speaker on the bottom of the speaker to prevent the speaker from damage.

ON BATTERY

To retain the frequency received on each band while the tuner is turned off, install two batteries in the battery compartment at the rear of the tuner.

INSTALLATION

Be sure to turn off the POWER switch before installing the batteries.

Open the battery compartment lid, install two batteries, IEC designation R6 (size AA), with the correct polarity as illustrated, then close the lid.

See illust **G**, **H**.

Battery life

About one year of operation can be expected when using Sony SUM-3 (NS) New Super Batteries. Be sure to replace the batteries once a year to avoid damage from leaking batteries.

Note

If incorrect figures appear on the frequency display after turning on the POWER switch, turn off the POWER switch, take out and re-install the memory back-up batteries correctly and tune in the frequency.

OPERATION OF THE TUNER

Follow the numbered sequence.
(The illustration shows the ST-78S tuner)

During the tuning, when the frequency access to the station, the searching speed will slow down so that the tuning gets easier. However, when the FAST button is pressed during tuning, the searching speed will not slow down.

- STEREO indicator illuminates when an FM stereo program is received.
- TUNED indicator illuminates when a station is tuned in.
- METER BAND indicator (for ST-78S) illuminates to show the receiving frequency is in an SW meter band.

Adjust the antenna as required.

FM: Pull out the telescopic antenna and adjust its length, direction and angle for the best reception.

SW (for ST-78S): Pull out the telescopic antenna to its full length and stand it vertically.

MW/LW (LW for ST-78L): When the BAND selector is set to MW or LW, the built-in ferrite bar antenna is used instead. Since this antenna is directional, rotate the set horizontally for optimum reception, if necessary.

MORE ABOUT FM ANTENNAS

Good FM reception depends not only on tuner sensitivity but on the quality of the received signals. This is determined by the signal strength, the presence of multipath signals* and the geographic location of the FM station. To get the best from your tuner, use an antenna suited to your location.

Dipole antenna with reflector and director has increased sensitivity to front signal and reduced sensitivity to rear signals.

Multi-element type has a narrower pickup pattern with high frontal sensitivity and superior rejection of rear and multipath signals. To receive a distant or weak signal station, use this type of antenna.

* Multipath signals

Multipath interference is caused by signal reflections from hills or structures that reach the receiving antenna perceptibly later than a direct signal. The effects of a multipath condition appear as high-frequency noise, distortion, and loss of channel separation of the FM stereo programs. These effects may be eliminated, to a great extent, by using a coaxial lead-in and a good directional antenna that is correctly oriented.

TAPE PLAYBACK

Follow the numbered sequence.

Auto reverse system

Press the ► button to playback the front side of the cassette. The playback will be in the reversed side automatically after the tape end of the playback of the front side.

Press the ◀ button to playback the back side of the cassette. The tape will stop when the back side is completely played back.

AUTO PLAY

To rewind the tape and play from the beginning of the tape, use the auto play function. The cassette deck can automatically replay a tape immediately after rewinding.

● Auto play operates only on the playback of the front side of the cassette.

After the tape is completely rewound, the tape will automatically replay.

TAPE RECORDING

It is only possible to record the front side of the cassette.

TO RECORD

Follow the numbered sequence.

AUTOMATIC RECORDING SYSTEM

No recording level adjustment is necessary with the new automatic recording system.

The recording level is not affected by the volume, BALANCE or graphic equalizer controls, so you can listen to the program at any volume and with any tone adjustments you want while recording.

MORE ACCURATE RECORDING STARTS

You can use the || (pause) button to start recording more accurately than is possible when recording is started by pressing both the ● button and the ► button.

- ① After completing step ③, press the || button.
- ② Hold the ● button down and press the ► button.
- ③ At the moment you wish to start recording, you need only press the || button again.

AUTOMATIC TAPE SELECT SYSTEM

	TYPE I (NORMAL) cassette	TYPE II (CrO ₂) cassette	TYPE III (Fe-Cr) cassette	TYPE IV (METAL) cassette	
Tape detector slots	 the tab	 CrO ₂ tape detector slots	 same as the TYPE I cassette	 METAL tape detector slots	 METAL tape which has no METAL tape detector slots
TAPE indicator	 TYPE I (NORMAL)	 TYPE II (CrO ₂)	 TYPE I (NORMAL)	 TYPE IV (METAL)	 TYPE II (CrO ₂)

With the TAPE SELECTOR switch at the AUTO position, this automatic tape select system is actuated by the detector slots of certain cassettes and automatically sets the optimum recording and playback characteristics. The tape type detected will be shown by the indicator.

As shown in the above illustrations, when inserting TYPE III (Fe-Cr) cassettes and TYPE IV (METAL) cassettes which have no METAL tape detector slots, the correct TAPE indicator does not light up and the automatic tape select system cannot work properly. Set the TAPE SELECTOR switch at the rear to the III Fe-Cr (IV METAL) position when using these cassettes.

SONY : METALLIC	Other metal tapes	TYPE IV (METAL)

RECORD MUTING

By pressing the  (record muting) button during recording, four seconds interspacing is provided automatically, eliminating unwanted program material such as broadcasting commercials. While the record muting is operating, the incoming signal is not recorded on the tape but it continues to register on the meters and feed to the monitor so that you know exactly what is going on.

- ① Press the  button when the segment you do not want to record begins. The indicator of the  button will blink, and the tape path will pause automatically after four seconds.
- ② When you want to resume recording, press the  button.

To insert a blank over four seconds long

Hold down the  button for as long as you want the blank segment on the tape to be. After four seconds, the indicator of the  button will blink more rapidly. When you release the  button, the tape deck will be in the pause mode. When you want to resume recording, press the  button to release the pause mode.

ERASING

When the cassette deck functions in recording mode, the erase head automatically erases any previously recorded material.

To erase without recording :

- ① Make sure that the safety tab of the cassette is in place, or that the tab slot is covered with plastic tape.
- ② Insert the cassette to be erased and check that the tape type indicator corresponds to the type of tape inserted. Switch the TAPE SELECTOR switch if the indicator and the tape do not correspond.
- ③ Press the TAPE button of the FUNCTION selector.
- ④ While holding the  button down, press the  button.

AUTOMATIC MUSIC SENSOR (AMS) SYSTEM

During playback, use the Automatic Music Sensor (AMS) to locate the beginning of the selection being played or the following selection. The AMS searches for the blank space between selections, and playback will start automatically from the beginning of the selection.

During forward playback

During reverse playback

At the beginning of the selection, the ◀◀ or ▶▶ button will be released and playback will begin.

To assure the AMS operation

- To search for the beginning of the selection being played, wait about 15 seconds after the selection starts before pressing the ◀◀ or ▶▶ button; otherwise the previous selection will be played back.
- To search for the beginning of the following selection, do not press the ▶▶ button immediately before the starting point of the following selection; otherwise playback might begin from the beginning of the selection after the following one.

Notes on the blank spaces

- Since AMS works by searching out the blank spaces on a tape, it may not operate if there is noise in the space between selections, or if the space is less than 4 seconds long. The record muting facility of this tape deck can make a four second blank space that will assure AMS operation on any recorded tape.
- If the record music includes a long pause, or if it continues for a time at sufficiently low volume, as may happen for instance with classical music, or if any selection is less than 20 seconds long, the AMS will treat it as a blank.

NOTES ON CASSETTES

Cassette insertion

- Before inserting a cassette, take up any slack in the tape to prevent it from becoming tangled around the capstan.

To protect cassettes from accidental erasure

Remove the tab as illustrated so that the record mode does not function when the record button is pressed. To record on a cassette once tabs have been removed, simply cover the slot with plastic tape.

To protect side A recording

Do not stick any material on the cassette except for tape on the circled portions.

- Be careful not to cover the detector slots of the TYPE II (CrO₂ tape) and TYPE IV (metal tape) cassettes.

Cassette care

- Do not stick thick paper or tape onto the cassette, as this may affect proper cassette alignment and prevent proper tape contact with the head.
- Keep cassettes away from magnetic equipment such as speakers, amplifiers, etc., as erasure or distortion on your recorded tape could occur.
- Do not expose a cassette to direct sunlight, extremely cold temperatures or moisture.

REPRODUCTION OF PHONO OR CD/AUX PROGRAM SOURCES

You can listen to or record the disc program connected to the PHONO jacks or the auxiliary input sources such as another tape deck or compact disc player connected to the CD/AUX jack using Sony RK-81A connecting cord (optional).

- ① Press the POWER switch.
- ② Press the PHONO button of the FUNCTION selectors.
- ③ Play the program source.
- ④ Adjust the volume, equalizer controls and stereo balance.

The CD/AUX jack has priority over the PHONO jacks. If the CD/AUX jack and PHONO jacks are both connected and the PHONO button is depressed, you cannot listen to the record programs.

SOUND ADJUSTMENTS

STEREO BALANCE

Adjust the BALANCE control as necessary to produce a well defined stereo image.

TONE CONTROLS USING THE GRAPHIC EQUALIZER CONTROLS

Each graphic equalizer control has boost/cut range of 10 dB. The level of a band will be increased by sliding a control upwards, and decreased by sliding it downwards.

To equalize the sound, first set all equalizer controls at their 0 dB center position and lay the program. Slide the control of the frequency band to be equalized upwards or downwards until you perceive an improvement.

Frequency coverage of each equalizer control

- 100 Hz:** Use this control to boost or cut the bass.
- 400 Hz:** Use this control to adjust the middle frequency range—the human voice and the middle frequencies of instrumental music.
- 1 kHz:** Use this control to provide more presence for vocals.
- 4 kHz:** Use this control to adjust the brightness of sound.
- 12 kHz:** This control effects general treble. Slide downward to reduce high frequency noise, such as tape hiss.

SECTION 2 DISASSEMBLY

REMOVAL

HANDLE

Pull out handle by pushing the button of both sides.

SPEAKERS

Remove speakers.

CONNECTORS

Remove connectors.

SIDE PLATE

2 Pull out both side plates.

501	1-555-839-21	CORD, SPEAKER
502	1-556-477-00	CORD (WITH CONNECTOR)

NOTE: Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

TROUBLE CHECKS

The following checks will assist in the correction of most problems which you may encounter with your set.

Before going through the check list below, first pay attention to the following fundamental points.

- The power cord must be connected firmly.
- The speaker connection must also be firm.
- The cables must be connected firmly.

RADIO PROGRAM RECEPTION

The TUNED indicator reading is unstable.

- Adjust the antenna.

The STEREO indicator flickers

- Adjust the antenna.

Severe hum or noise

- The signal strength is too weak.
Connect the external antenna. See page 10 or 11.
- Adjust the antenna.
- Connect the ground wire.

Last station memory is not retained

- Check that the batteries for retaining the frequency are installed correctly.

CASSETTE DECK OPERATION

The ● button cannot be depressed.

- No cassette in the cassette holder.
- The tab is removed from the cassette. See page 16.

The ● button or ► button cannot be depressed.

- The tape is wound completely.

Tape does not move even when the ► button is pressed.

- The || button is depressed.

Recording or playback cannot be made or there is a decrease in sound level.

- Dirty heads.
- Magnetic contamination on the record/playback head.
- Improper setting of the FUNCTION selectors.

Excessive wow or flutter, or sound drop-out.

- Contamination of the capstan or pinch roller.

Insufficient erasure

- Magnetic contamination of the erase head.

Increase of noise or erasure of high frequencies

- Magnetic built-up of the erase head.

Unbalanced tone in higher frequencies

- Improper setting of the DOLBY NR switch. If recorded with the switch set to ON, play back with it at ON. If recorded with it set to OFF, play back with it at OFF.
- Improper setting of the TAPE SELECTOR switch. See page 15. If recorded in the wrong position, adjust the tone controls in playback.

Incorrect AMS operation

- Blank space between the selections may be too short.

GENERAL

No audio

- Slide the volume control to the right.
- Check the FUNCTION selector setting.

No audio from one channel or unbalanced left and right volume

- Adjust the BALANCE control.
- Check the speaker connections of the inoperative channel.

Reverse left and right sound

- Check the speaker cord connection and speaker location.

Lack of bass sound or apparently imprecise physical location of musical instruments

- Check the speaker connection for proper phasing.

HARDWARE NOMENCLATURE

Screw:

P 3 x 10

L: Length in mm

D: Diameter in mm

Type of head

Indicated slotted-head only.

Unless otherwise indicated, it means cross-recessed head (Phillips type).

Nut, Washer, Retaining ring:

N 3

Diameter of usable screw or shaft

Reference designation

Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		brazier-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self-tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring

FM STEREO/FM-AM TUNER [ST-78L]

*AEP Model
UK Model*

Note: ST-78L is an FM stereo/FM-AM tuner in FH-7.

MELF (Metal Electrodes Face-Bonding) Components (AEP, E Model)

Warning

If MELF components are forcibly removed from the printed circuit board with pincers or pliers, the circuit board pattern is likely to peel away. Always remove MELF components according to the procedure described on the next page. Replace MELF components with the lead type components.

MELF components are soldered directly to the surface of the printed circuit board.

MELF resistors and capacitors have the same dimensions and are distinguished by their background colors: light brown for resistors, and pink or light green for capacitors.

The MELF resistor color coding is the same as for conventional resistors, and MELF capacitor color coding is the same as for tube-type ceramic capacitors. Note, however, that all MELF resistors are rated at $\frac{1}{4}W$ and $\pm 5\%$.

Components larger than resistors and without a color code are cross conductors, which are used instead of jumper wires.

MELF (Metal Electrodes Face-Bonding) Components (AEP, E Model)

Warning

If MELF components are forcibly removed from the printed circuit board with pincers or pliers, the circuit board pattern is likely to peel away. Always remove MELF components according to the procedure described on the next page. Replace MELF components with the lead type components.

MELF components are soldered directly to the surface of the printed circuit board.

MELF resistors and capacitors have the same dimensions and are distinguished by their background colors: light brown for resistors, and pink or light green for capacitors.

The MELF resistor color coding is the same as for conventional resistors, and MELF capacitor color coding is the same as for tube-type ceramic capacitors. Note, however, that all MELF resistors are rated at $\frac{1}{4}$ W and $\pm 5\%$.

Components larger than resistors and without a color code are cross conductors, which are used instead of jumper wires.

1. Structure

Fig. 1

2. Color Code Reading**(Example of Resistor)****(Example of Capacitor)**

Fig. 2

3. How to Remove MELF Components and Mount Replacements

Use a soldering iron of at least 40W with an iron tip 4 mm in diameter and file the tip down to the angle shown in the diagram.

Fig. 3

1. Bring the flat surface of the soldering iron in equal contact with both soldered ends of the component.
2. The solder should melt in about 4 seconds. (The solder will melt more readily if a small amount of solder is attached to the iron tip and the iron tip is placed against the component.)
3. Once the solder has melted, tap the component aside with the tip of the soldering iron, and remove it from the board.

Fig. 4

4. Use lead type resistors or capacitors to replace the MELF components. These replacements may be mounted either with short leads (see Fig. 5), or by covering a lead with tubing (see Fig. 6).

SECTION 1
BLOCK DIAGRAM

SECTION 2
ADJUSTMENTS

MW/LW SECTION

Setting:

Band Selector: MW/LW

Setup: after adjusting LW, adjust MW.

AM rf signal
generator30% amplitude
modulation by
400 Hz signalPut the lead-wire
antenna close to
the set.VOM ①
(range: 0.5–5 V ac)

- Repeat the procedures in each adjustment several times, and the frequency coverage and tracking adjustments should be finally done by the trimmer capacitors.

MW Slow Speed Action Level Adjustment

- Set BAND selector switch (S1) to MW. Confirm that the receiving condition is no signal.
- Adjust RT401 so that the collector voltage of Q605 is 4.0 – 5.0V.

VOM
(dc range)

LW PLL Bias Adjustment

- Connect the oscilloscope as shown on the right.
- Set BAND selector switch (S1) to LW.
- Push TUNING (+, –) button for 153kHz.
- Adjust RT602 so that the waveform is shown below.

 $A : B = 1 : 1$
A is approx. 0.7V

- Confirm that the waveform is locked when the set is tuned to 344kHz.

oscilloscope

RT602

MW/LW OSC Voltage Adjustment

- Set BAND selector switch (S1) to MW.
- Push TUNING (+, –) button for 522kHz. Adjust L402 for 1.0 – 1.1V VOM reading.
- Push the button for 1,602kHz. Adjust CT401 for 8.9 – 9.0V VOM reading.
- Set BAND selector switch (S1) to LW.
- Push TUNING (+, –) button for 153kHz. Adjust L404 for 1.0 – 1.1V VOM reading.
- Push the button for 344kHz. Adjust CT-403 for 8.9 – 9.0V VOM reading.

VOM (dc range)

BAND

L404
CT403
L402
CT401

MW IF ADJUSTMENT

Adjust for a maximum reading
on VOM ①.

T401 450kHz

LW TRACKING ADJUSTMENT

Adjust for a maximum reading
on VOM ①.

L401 170kHz

CT404 310kHz

MW TRACKING ADJUSTMENT

Adjust for a maximum reading
on VOM ①.

L401 603kHz

CT402 1,404kHz

RT401

FM SECTION 1

Setting:

Band Selector: FM

FM rf Stereo Signal	FM rf Monaural Signal
Carrier frequency: 98MHz Modulation: Audio 400Hz, 16.25kHz deviation Subchannel 38kHz 16.25kHz deviation Pilot 19kHz 7.5kHz deviation	Carrier frequency: 98MHz Modulation: 1kHz, 40kHz deviation

FM/MW PLL Bias Adjustment

1. Connect the oscilloscope as shown on the right.
2. Set BAND selector switch (S1) to FM.
3. Push TUNING (+, -) button for 87.5MHz.
4. Adjust RT601 so that the waveform is shown below.

A : B = 2.0 : more than 3.0
A is approx. 0.4V

5. Push the button for 108MHz.
Confirm that the waveform is locked as shown below.

A : B = 1.5 : 3.5
A is approx. 0.3V

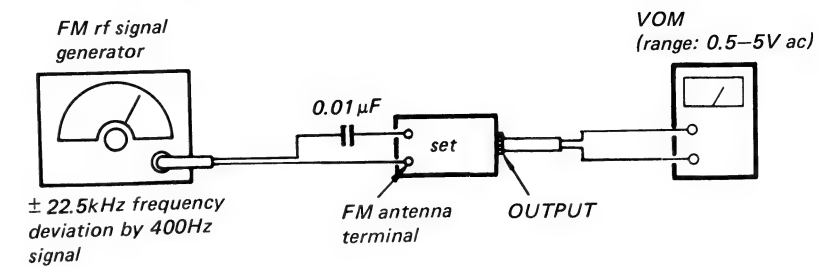

6. Set BAND selector switch (S1) to MW.
Confirm that the waveform is locked when the set is tuned to 522kHz.
7. Confirm that the waveform is locked when the set is tuned to 1,602kHz.

RT601

FM Tracking Adjustment

1. Push TUNING (+, -) button for 98MHz.
2. Approach L102 and L103 not to contact each other.
3. Adjust L101 and L103, and repeat the adjustment 2 - 3 times for maximum VTVM reading.
(Adjust L103 in the direction as shown by arrow A).

FM OSC Voltage Adjustment

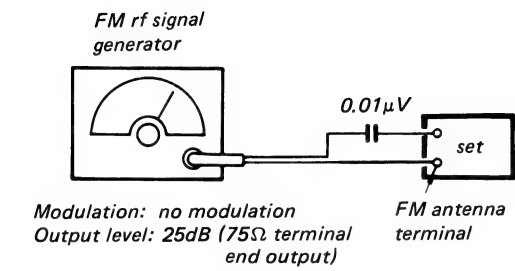

Push TUNING (+, -) button for 108MHz.
Adjust L105 for 8.9 - 9V VOM reading.

FM SECTION 2

TUNED Indicator Adjustment

Setting:

Procedure:

Adjust RT201 so that TUNED indicator (D201) lights up.

RT201

FM Discriminator Adjustment

Setting:

VOM
(range: 5V dc)

Procedure:

Push TUNING (+, -) button for 98MHz.
Adjust T201 for 0V VOM reading.

T201

VCO Adjustment

Setting:

frequency counter

Procedure:

Adjust RT302 so that the frequency counter indicates 19kHz ±50Hz.

RT302

FM Stereo Separation Adjustment

Procedure:

Carrier frequency: 98MHz
Output level: 1mV (60dB)
Modulation:
Audio (400Hz): 16.25kHz deviation
Pilot (19kHz): 7.5kHz deviation
Sub-channel: 16.25kHz deviation

FM stereo signal generator output channel	VTVM connection	VTVM reading (dB)
L-CH	L-CH	(A)
R-CH	L-CH	(B) Adjust RT301 for minimum reading.
R-CH	R-CH	(C)
L-CH	R-CH	(D) Adjust RT301 for minimum reading.

L-CH Stereo separation: (A) - (B)
R-CH Stereo separation: (C) - (D)

The separations of both channels should be equal.

RT301

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "●" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF: μF, PF: μF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F: nonflammable

COILS

- MMH: mH, UH: μH

SEMICONDUCTORS

- In each case, U: μ, for example: UA...: μA..., UPA...: μPA..., UPC...: μPC, UPD...: μPD...

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "♣" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS

- MMH : mH, UH : μH

SEMICONDUCTORS

UA...: μA..., UPA...: μPA..., UPC...: μPC,
UPD...: μPD...

FM STEREO/FM-AM TUNER
[ST-78S]

E Model

Note: ST-78S is an FM stereo/FM-AM tuner in FH-7.

MELF (Metal Electrodes Face-Bonding) Components (AEP, E Model)

Warning

If MELF components are forcibly removed from the printed circuit board with pincers or pliers, the circuit board pattern is likely to peel away. Always remove MELF components according to the procedure described on the next page. Replace MELF components with the lead type components.

MELF components are soldered directly to the surface of the printed circuit board.

MELF resistors and capacitors have the same dimensions and are distinguished by their background colors: light brown for resistors, and pink or light green for capacitors.

The MELF resistor color coding is the same as for conventional resistors, and MELF capacitor color coding is the same as for tube-type ceramic capacitors. Note, however, that all MELF resistors are rated at 1/4 W and ±5%.

Components larger than resistors and without a color code are cross conductors, which are used instead of jumper wires.

MELF (Metal Electrodes Face-Bonding) Components (AEP, E Model)

Warning

If MELF components are forcibly removed from the printed circuit board with pincers or pliers, the circuit board pattern is likely to peel away. Always remove MELF components according to the procedure described on the next page. Replace MELF components with the lead type components.

MELF components are soldered directly to the surface of the printed circuit board.

MELF resistors and capacitors have the same dimensions and are distinguished by their background colors: light brown for resistors, and pink or light green for capacitors.

The MELF resistor color coding is the same as for conventional resistors, and MELF capacitor color coding is the same as for tube-type ceramic capacitors. Note, however, that all MELF resistors are rated at $\frac{1}{4}$ W and $\pm 5\%$.

Components larger than resistors and without a color code are cross conductors, which are used instead of jumper wires.

1. Structure

Fig. 1

2. Color Code Reading

Fig. 2

3. How to Remove MELF Components and Mount Replacements

Use a soldering iron of at least 40W with an iron tip 4 mm in diameter and file the tip down to the angle shown in the diagram.

Fig. 3

1. Bring the flat surface of the soldering iron in equal contact with both soldered ends of the component.
2. The solder should melt in about 4 seconds. (The solder will melt more readily if a small amount of solder is attached to the iron tip and the iron tip is placed against the component.)
3. Once the solder has melted, tap the component aside with the tip of the soldering iron, and remove it from the board.

Fig. 4

4. Use lead type resistors or capacitors to replace the MELF components. These replacements may be mounted either with short leads (see Fig. 5), or by covering a lead with tubing (see Fig. 6).

Fig. 5

MW/SW SECTION 2

SW1/SW2 PLL Bias Adjustment

1. Connect the oscilloscope as shown below.
2. Set BAND selector switch (S1) to SW2.
3. Push TUNING (+, -) button for 9.5MHz.
4. Adjust RT603 so that the waveform is as shown below.

A : B = 1 : 1
A is more than 0.65V

5. Push the button for 21.75MHz. Confirm that the waveform is locked as shown below.

A : B = 0.46V : 0.84V
(reference)

6. Set BAND selector switch (S1) to SW1. Confirm that the waveform is locked when the set is tuned to 3.2MHz.

A : B = 1 : 1
A is more than 0.65V

7. Confirm that the waveform is locked when the set is tuned to 7.3MHz.

A : B = 0.46V : 0.84V
(reference)

FM/MW PLL Bias Adjustment

1. Connect the oscilloscope as shown on the right.
2. Set BAND selector switch (S1) to FM.
3. Push TUNING (+, -) button for 87.5MHz.
4. Adjust RT601 so that the waveform is shown below.

A : B = 2.0 : more than 3.0
A is approx. 0.4V

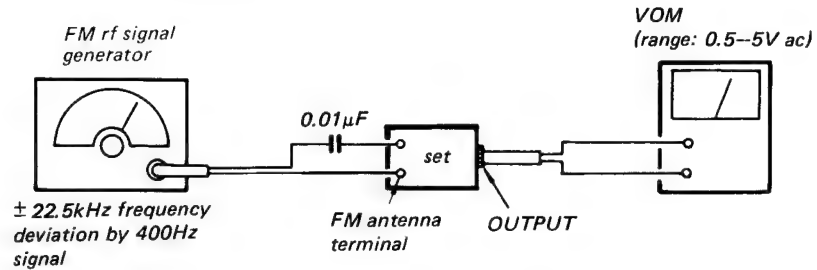

5. Push the button for 108MHz. Confirm that the waveform is locked as shown below.

A : B = 1.5 : 3.5
A is approx. 0.3V

6. Set BAND selector switch (S1) to MW. Confirm that the waveform is locked when the set is tuned to 522kHz.
7. Confirm that the waveform is locked when the set is tuned to 1,602kHz.

FM Tracking Adjustment

1. Push TUNING (+, -) button for 98MHz.
2. Approach L102 and L103 not to contact each other.
3. Adjust L101 and L103, and repeat the adjustment 2-3 times for maximum VOM reading.

(Adjust L103 in the direction as shown by arrow (A) .

The block diagram illustrates the internal components of the IC301 LA3390 integrated circuit, which functions as a radio receiver. The circuit is organized around several key functional blocks:

- FM/AM SELECT:** This block receives input from pins 10 and 9 and controls the switching between FM and AM reception modes.
- MUTING:** This block receives input from pin 4 and controls the muting function, which is indicated by a dashed line connecting it to the P.L.L. and MPX blocks.
- P.L.L. (Phase-Locked Loop):** This block is responsible for frequency synthesis and locking. It receives input from pin 18 and provides output to pin 17 and the MPX block.
- MPX (Multiplexer):** This block combines the signals from the P.L.L. and the FM/AM SELECT block to produce the final audio output.
- LED DRIVE:** This block receives input from pin 14 and provides output to pin 15, which is connected to an LED.
- Switching Mechanism:** A set of four switches is shown, controlled by pins 11, 12, 13, and 16. These switches route signals between the input stages (pins 10 and 9) and the internal processing blocks.

The circuit is powered by a 12V supply connected to pin 20 and ground connected to pin 1. The output of the MPX block is connected to pin 3, which is also connected to the LED DRIVE block.

INTEGRATED STEREO AMPLIFIER [TA-78]

Note: TA-78 is an integrated stereo amplifier in FH-7.

1. CIRCUIT DESCRIPTION

MUTING CIRCUIT

Q107 is a muting transistor.

It mutes output when the power switch is turned on and off or power voltage is much decreased.

When the power switch is ON:

Current flows on R308, C309 and R306, when the power switch is turned on.

Q110 is on until C309 finishes charging.

Q107 mutes output while Q110 is on.

When the power switch is off.

When Q109 base voltage is 0.6V lower than that of the emitter, Q109 is on.

Voltage charged to C310 is discharged through R307.

Then, Q107 turns on.

Power voltage fluctuation.

D105 is an 11V zener diode. Therefore, Q111 base voltage is 11V.

At this time, Q111 emitter voltage is 10.4V.

When power voltage decreases, and Q109 base voltage becomes 0.6V lower than that of the emitter, Q109 turns on.

Then Q107 mutes output.

When power voltage increased a little, Q110 turns ON.

Then Q107 turns ON and mutes output.

Graphic EQ circuit

Fig. 1 shows a part of graphic EQ circuit redrawn for easy comprehension.

Graphic EQ circuit consists of C1, 2, R1, 2, Q1.

The output level of frequency band decreases when S1 is set to side ①, because certain frequency band of input signal passes through EQ circuit to the ground.

The output level of frequency band increases when S1 is set to side ②, because NF circuit is connected to the EQ circuit causing certain frequency band to pass through the EQ circuit to the ground.

The frequency band of this EQ circuit can be changed by changing the value of a capacitor.

POWER SUPPLY UNIT

[AC-78]

Note: AC-78 is a power supply unit in FH-7.

CIRCUIT DESCRIPTION

Shift Circuit

In the case of a conventional amp, high voltage is required to obtain large output, and even during small output, high voltage continues to be supplied.

The heat produced from the amplifier is proportional to the voltage applied.

However, all the unneeded voltage changes into heat. It is disadvantageous for a low-output amplifier such as this unit.

The shift circuit on this model is employed to limit the high voltage supplied during small output to the minimum necessary, and control heat.

Shift Circuit Operation

The output signals from both channels of the TA-78 power amplifier enter D101 – 104, and are separated into plus and minus output by this circuit.

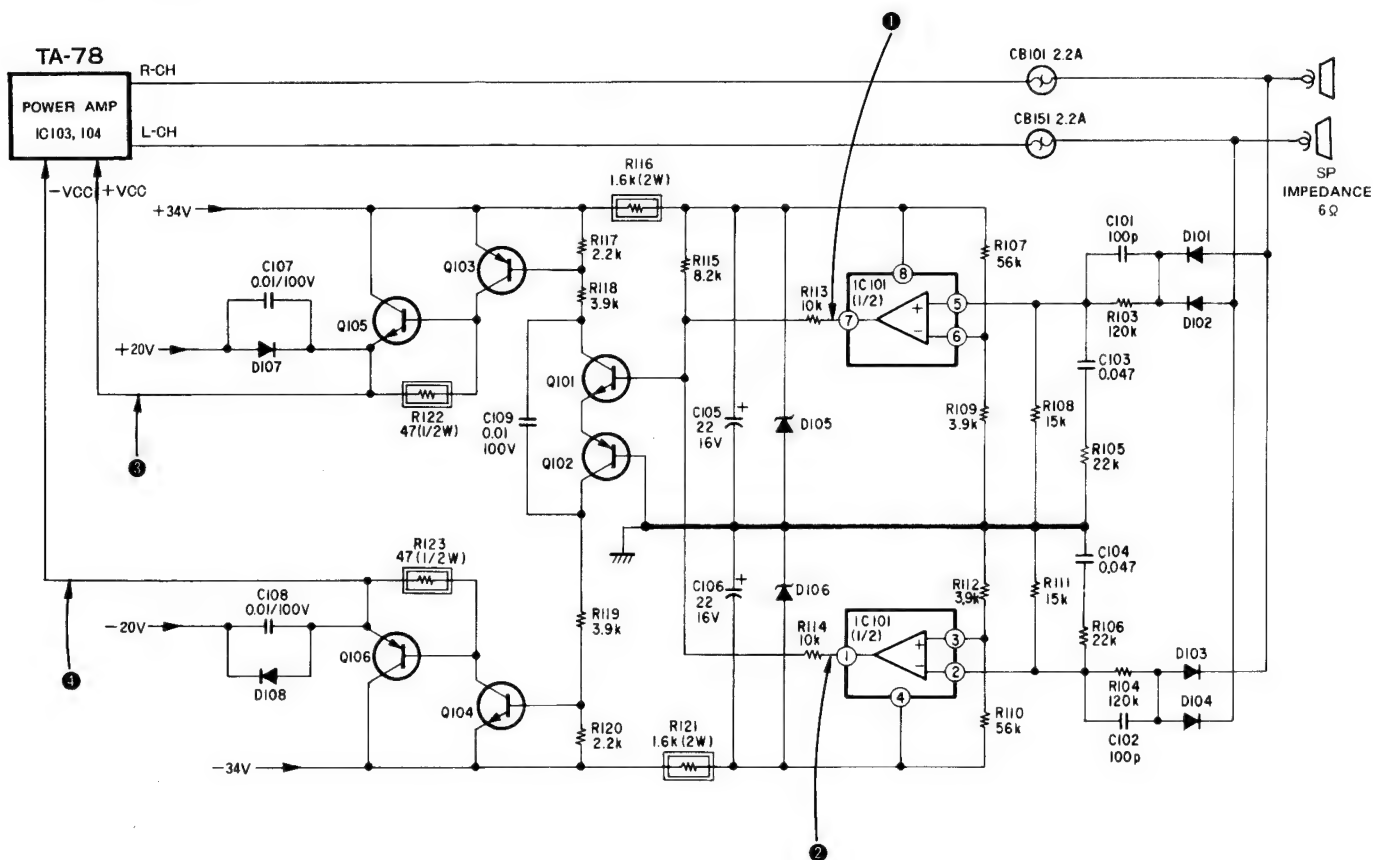

The detected output signal enters IC101, where it is compared with the level set at IC101 and the TA-78 output signal detected from D101 – 104.

During small output (approx. 5W), IC101 output goes low. At this time shift drive (Q101 – 104) all go off, and no bias is applied to Q105, Q106, which also go off, so +Vcc (+19V) and –Vcc (–19V) pass through D107, D108 respectively and are supplied to the power amplifier.

During large output (approx. 28W), IC101 output goes high. At this time shift drive (Q101 – 104) all go on, as do Q105, Q106.

±Vcc passes through Q105, Q106, becomes +Vcc (approx. +24.5V) and –Vcc (approx. –24V), and is supplied to the power amplifier. +Vcc (+19V) and –Vcc (–19V) are cut by D107, D108 being reverse biased.

Shift Circuit

Note: Waveforms and Voltage Values of check points ① – ④.

Notes on Repair

On this model's shift circuit, $\pm V_{cc}$ voltage changes according to the increase and decrease of the TA-78 output signal.

This indicates that the shift circuit is operating properly. To check shift circuit operation, refer to the chart below.

Waveforms and Voltage Values of shift circuit operation check points ① — ④ .			
SP Output Voltage (VTVM)	① , ②	③	④
0V with no signal output	(-11.5V)	(+19V)	(-19V)
5.5V with low output	(-11.5V)	(+16.5V) 	(-16.5V)

CASSETTE DECK

[TC-78]

Note: TC-78 is a stereo cassette deck unit in FH-7.

Tape Transport Mechanism Type	TCM-130R2
----------------------------------	-----------

SERVICING NOTE

NOTES ON REPAIR

When the mech deck is operated with the set in an upside-down position, misoperation may result. For repair while operating the mech deck, perform with the set in its normal position or standing on its side.

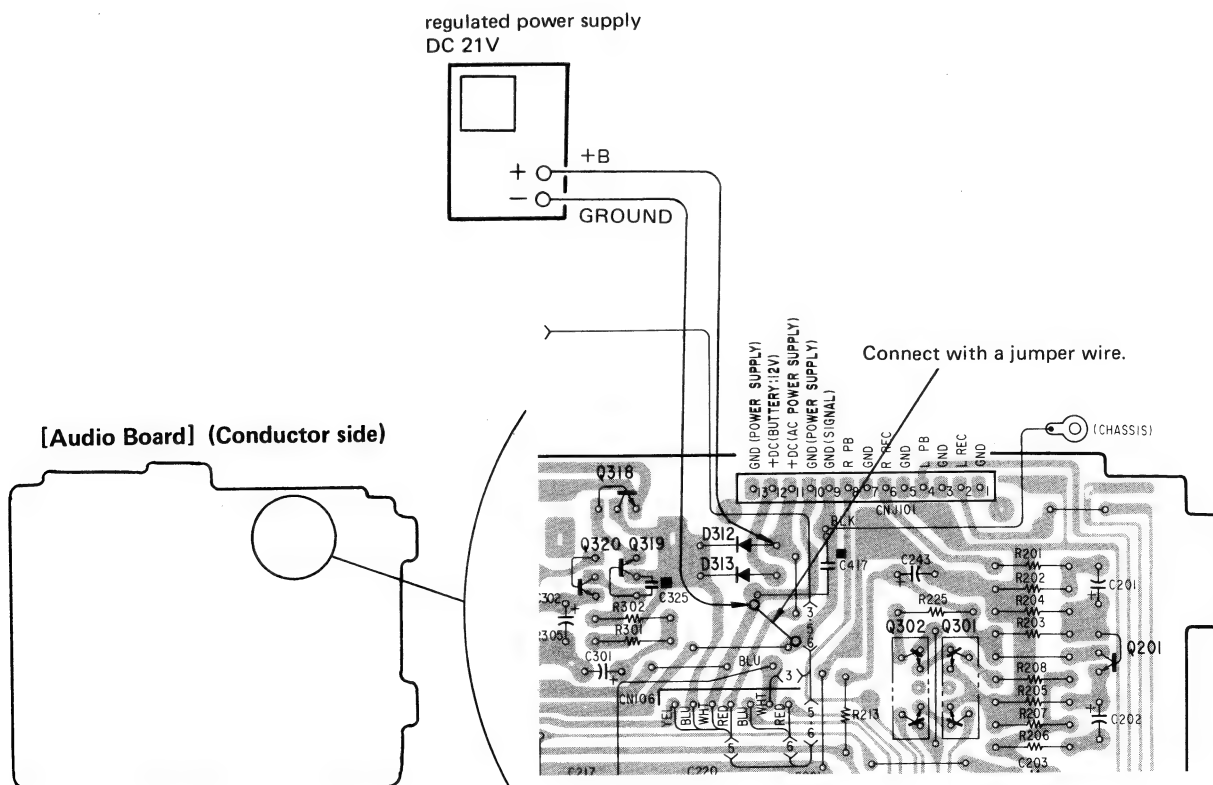

[To apply B+ voltage in repair]

The power supply voltage of this unit is fed from AC-78 via TA-78.

There are two ground lines for signal and power supply circuits, which are not connected in this unit. When this unit alone operates, connect the two ground lines with a jumper wire and a regulated power supply as illustrated.

After repairing, remove the jumper wire connected.

SECTION 1
CIRCUIT DESCRIPTION1-1. C-MOS MECHANISM CONTROLLER
TC9310N-001 (IC401)

* See page 3, 4 for MOS IC

(1) OUTLINE

This IC electrically controls the mechanism of this set. This IC puts out the required output signals in accordance with the switched-in commanding input signals with predetermined processing timings. This IC consists mainly of the following six blocks.

1. Input Circuits:

The input circuits eliminate chattering of the input signals, determine the priority of input switches and then latch the operational or desired mode.

2. Control Circuits:

The control circuits generate signals to control the timer operation, automatic music-selection (AMS) operation, automatic operation, reset operation, etc.

3. LED-Drive Circuits:

This circuits put out the drive signals to LED indicate the mode specified by items 1, 2.

4. Timing Circuits:

This circuit makes the switching periods of the output signals in good timings everytime a mode is changed to another one specified by items 1, 2.

5. Solenoid and Motor-Drive Output Circuits:

These circuits put out signals to operate the mechanism of the deck. The circuits connect to the solenoid-and motor-drive circuits.

6. Muting Signal Output Circuits:

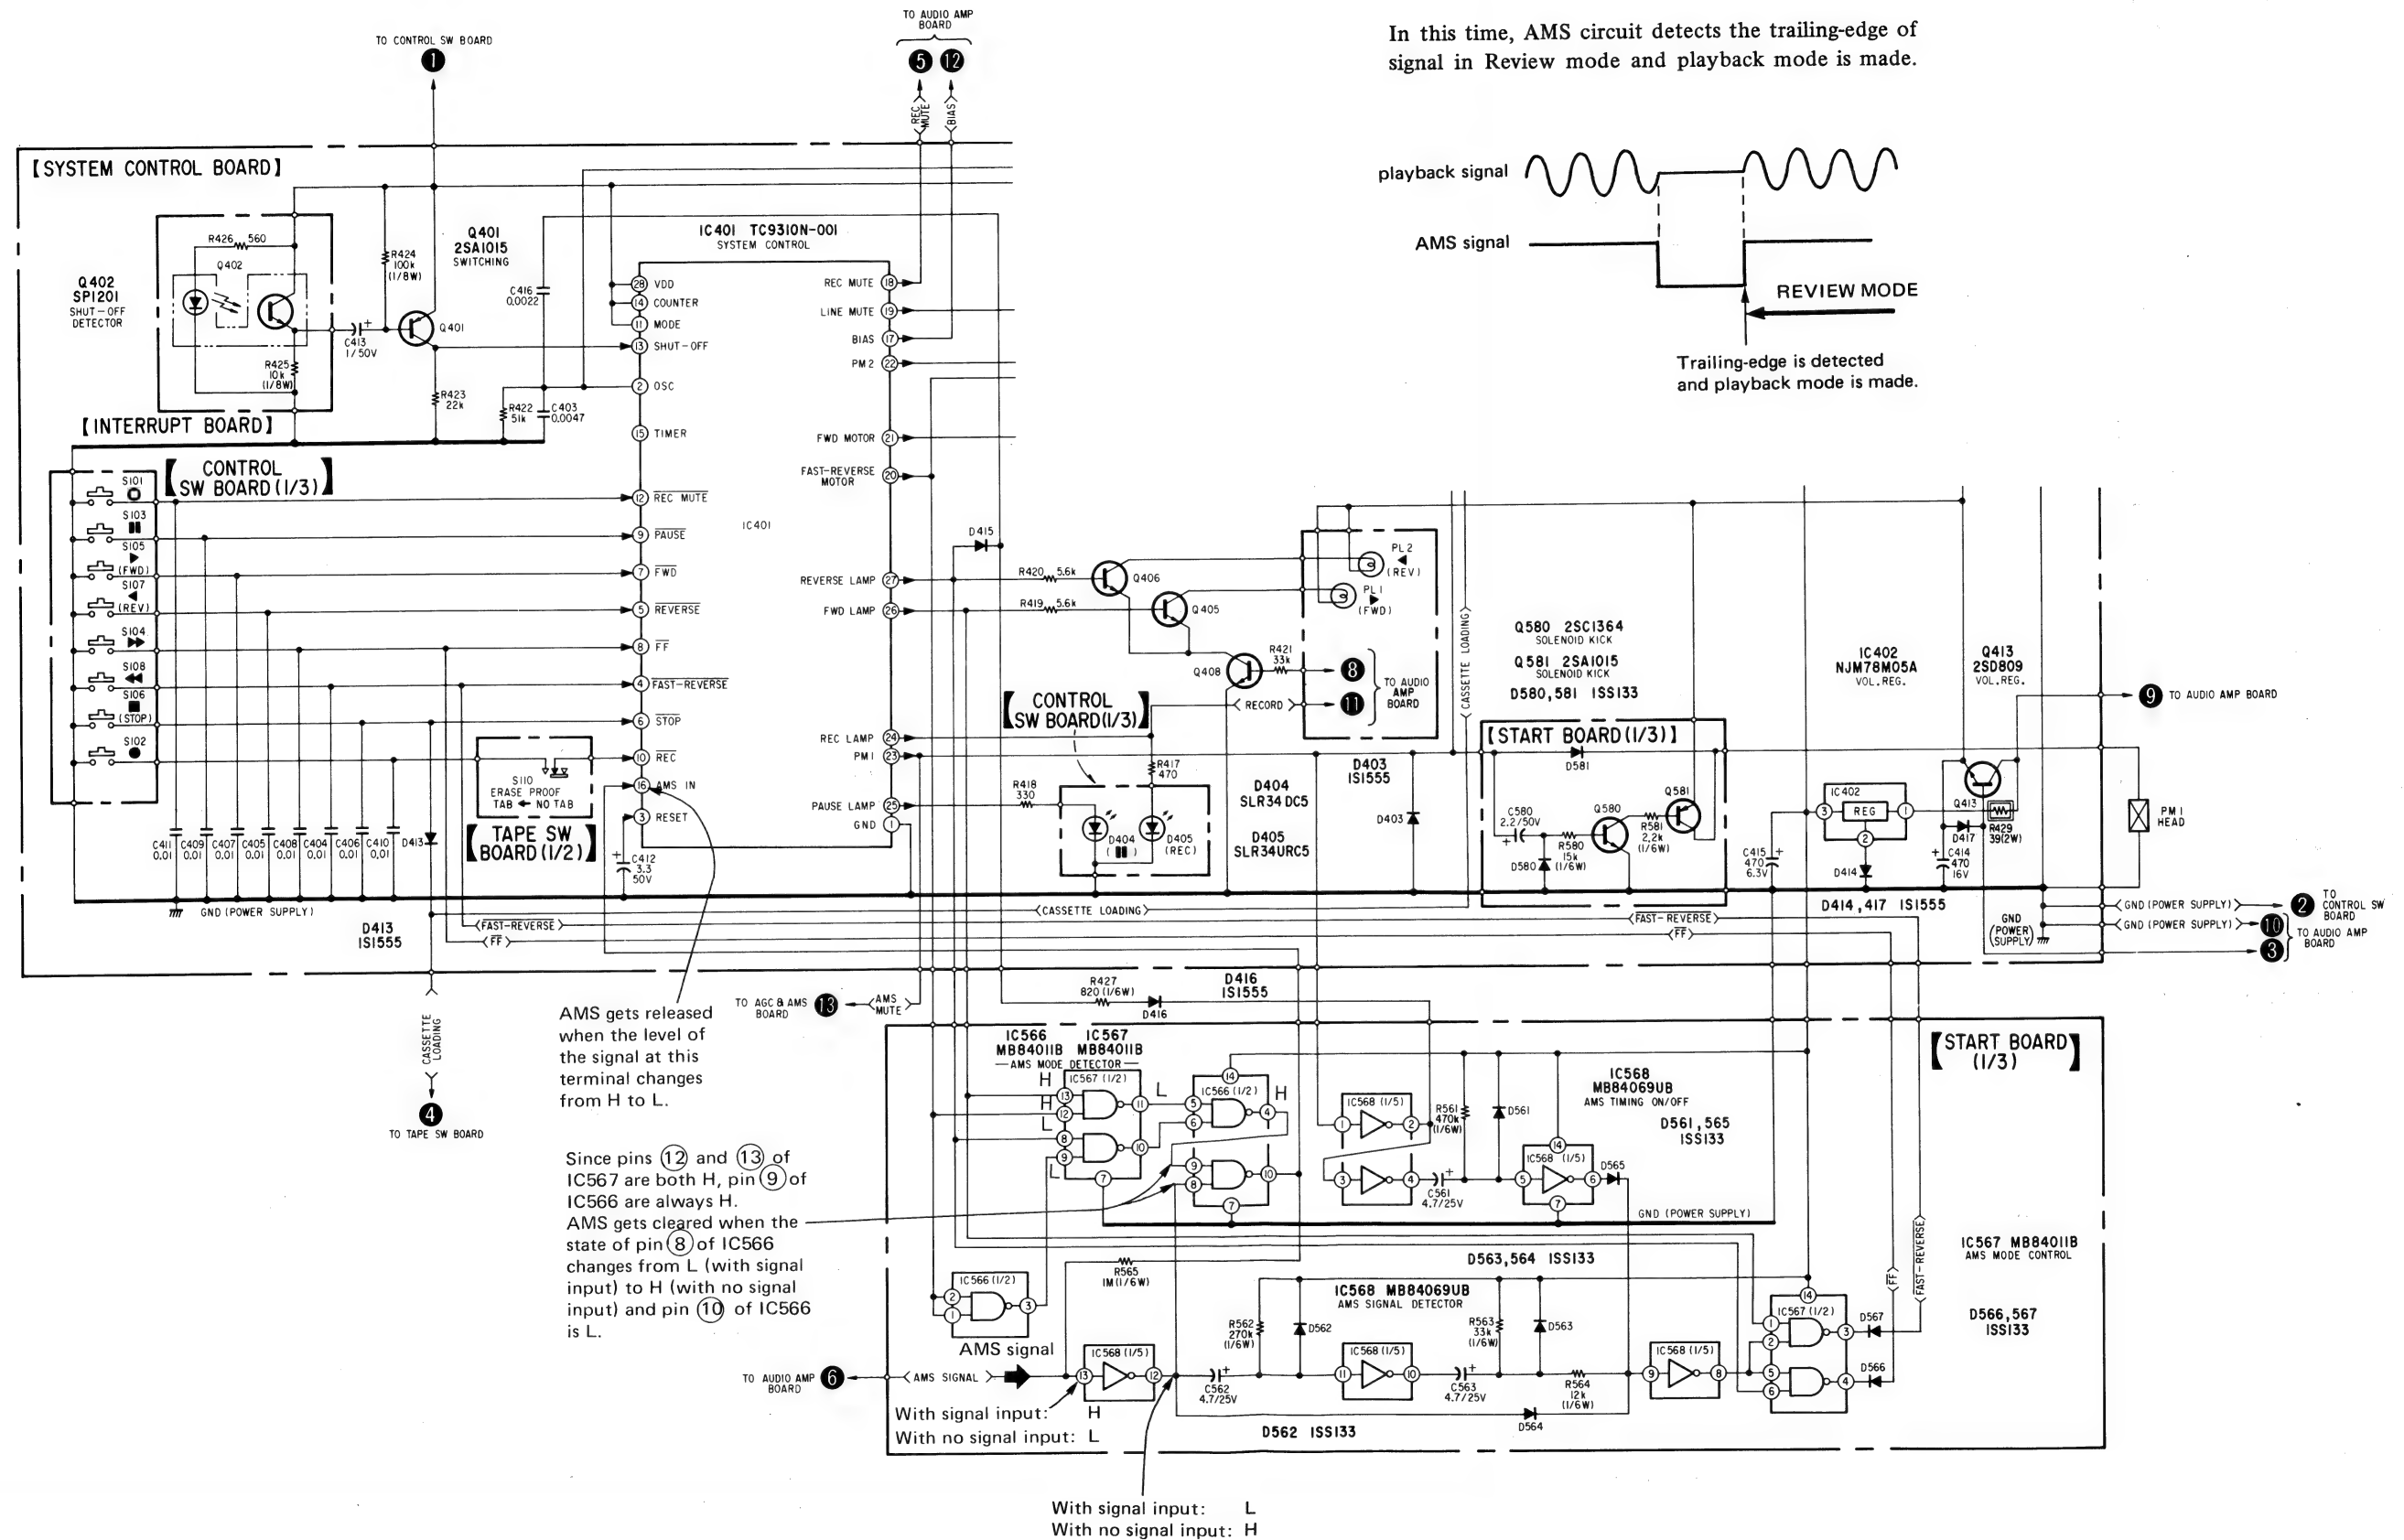

These circuits connect to the amplifier circuits for the elimination of noise and selection of audio-signal system.

(2) FUNCTION OF EACH TERMINAL

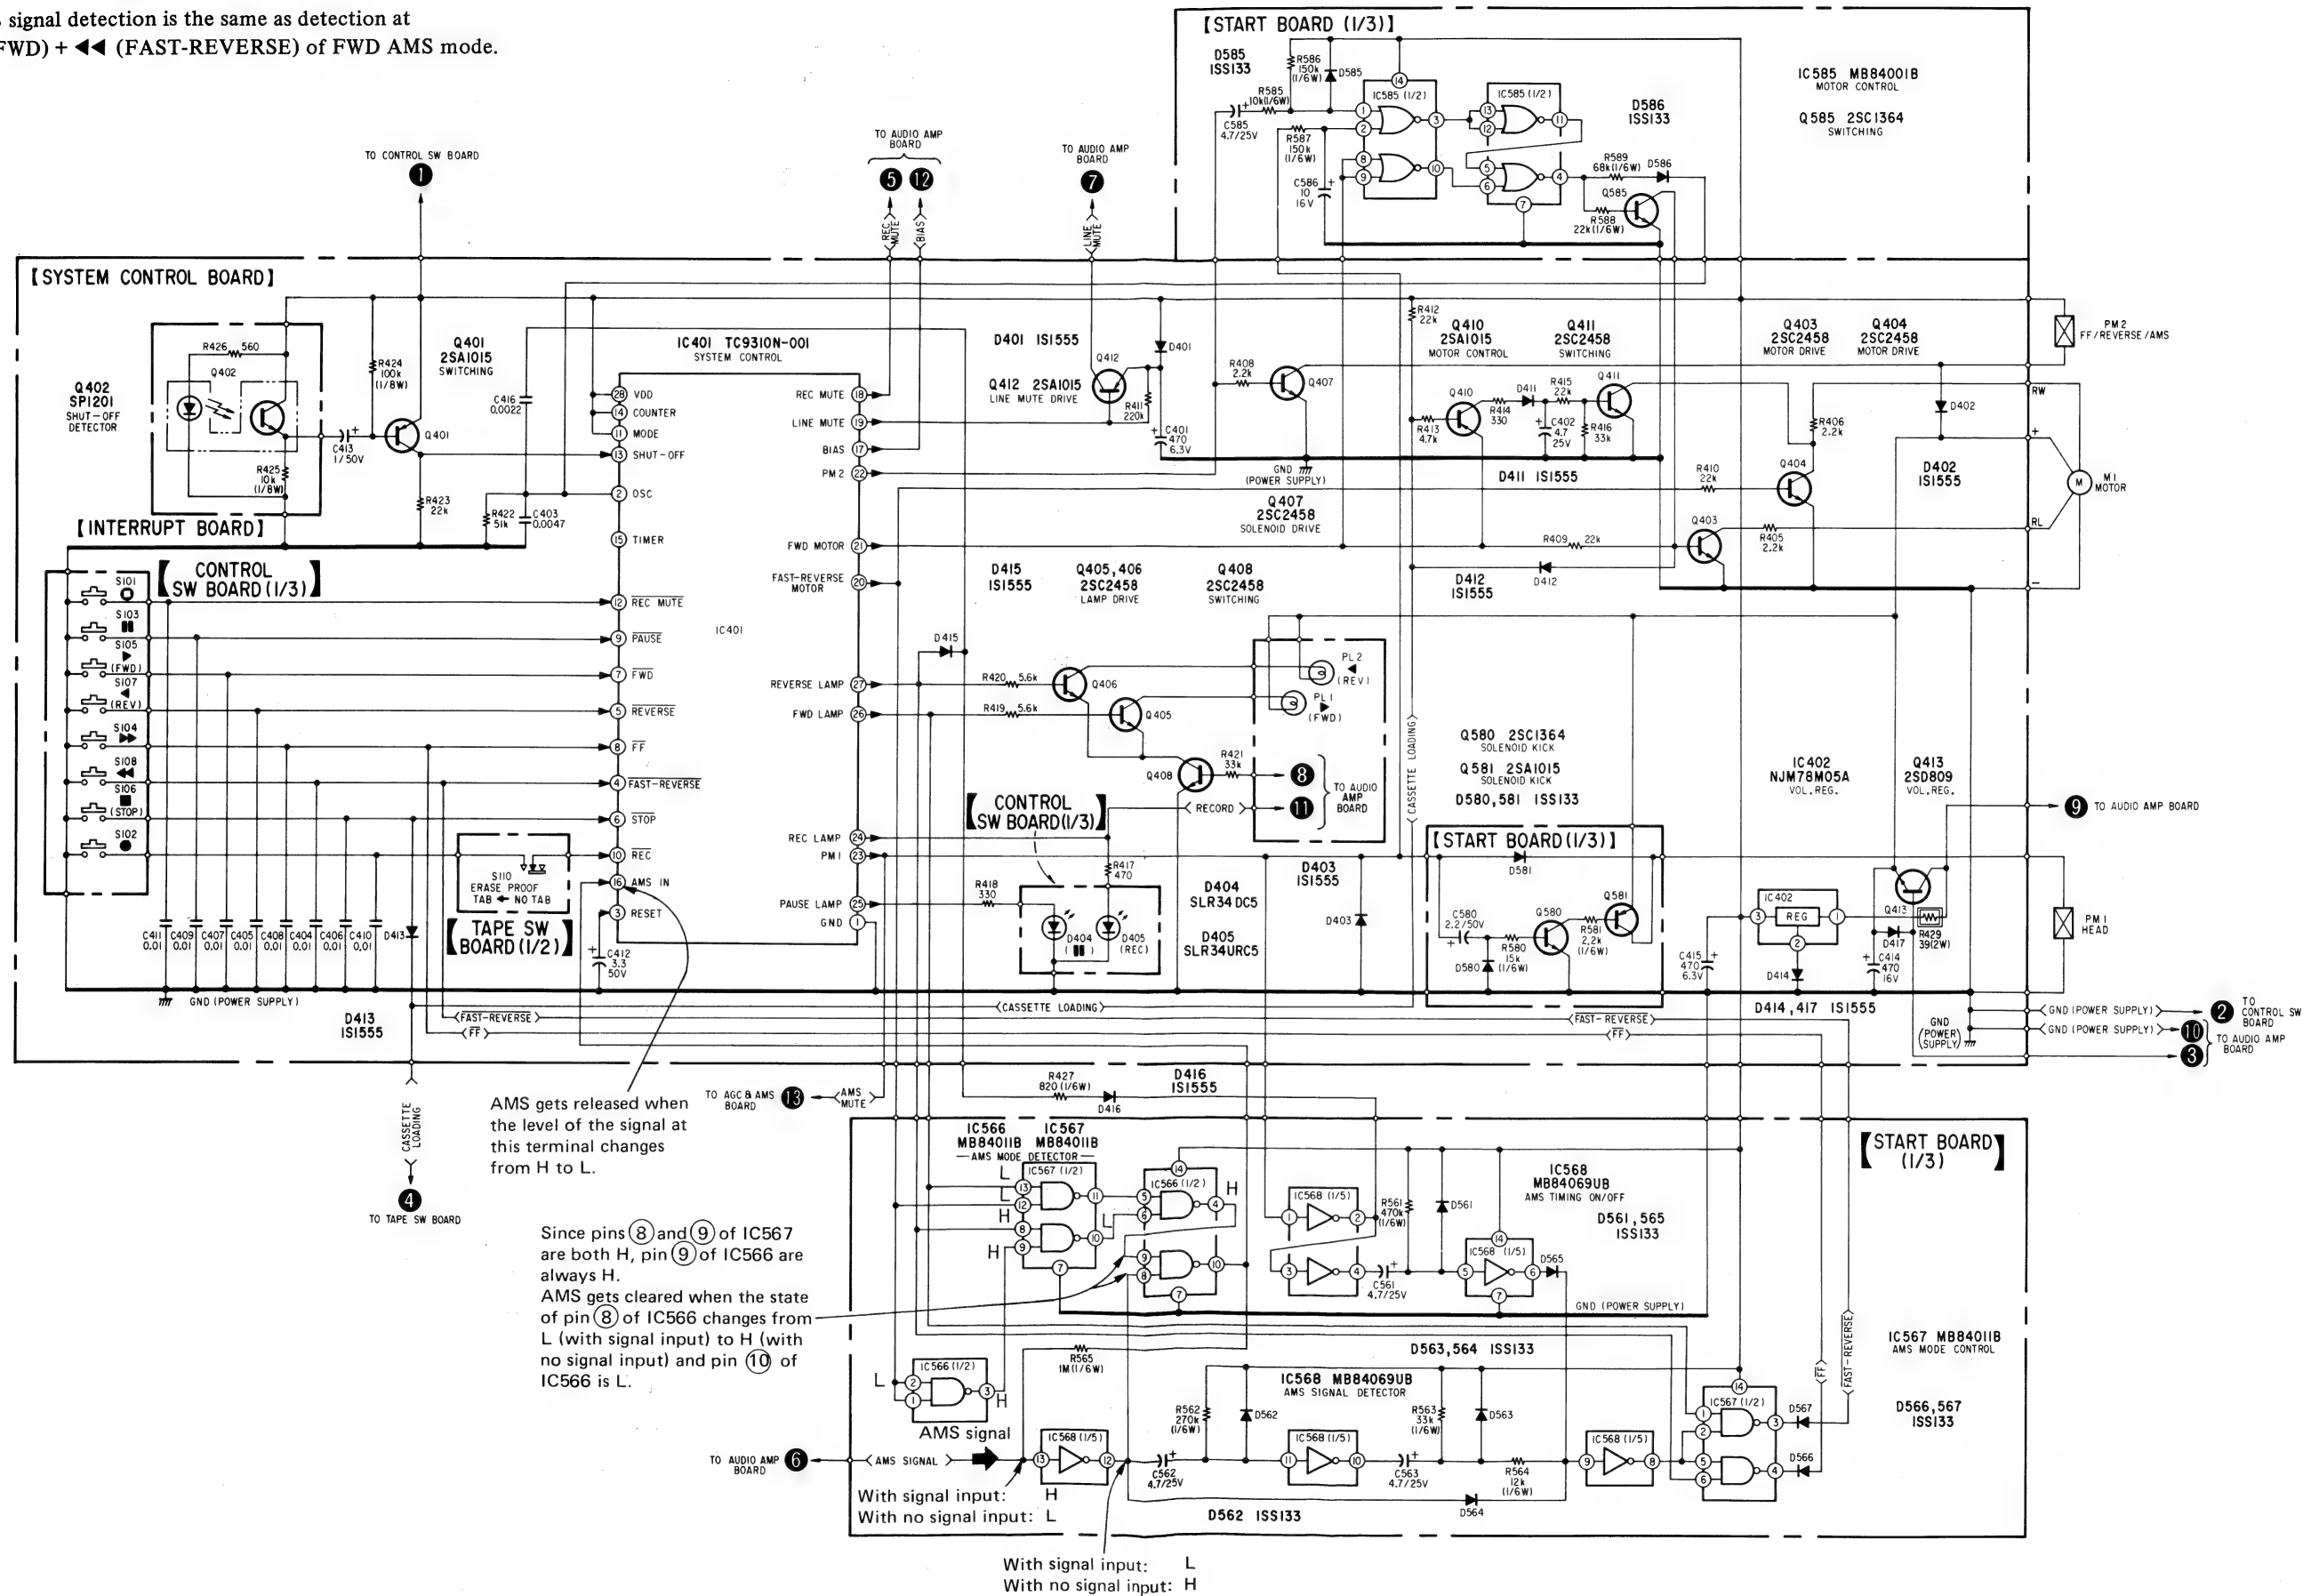

Terminal No.	Name	Function	Terminal No.	Name	Function
1.	GND	Grounding terminal of power supply.			
2.	OSC	Clock OSC terminal. (approx. 9kHz in this set.)			
3.	RESET (INPUT)	Signal input to put all of the operation of the set into the initial state.			
4.	FAST REVERSE (INPUT)	Signal input to commande the mechanism to Fast-Foward mode of REVERSE direction.			
5.	REV (INPUT)	Signal input to command the mechanism to playback the tape of REVERSE direction. This terminal becomes in AMS operation when this terminal is put into "L" together with FF or FAST-REVERSE input simultaneously.	8.	FF (INPUT)	Signal input to command the mechanism to set in fast-forward mode.
6.	STOP (INPUT)	Signal input to release a mode designated by other input switches.	9.	PAUSE (INPUT)	Command-signal input to make the set in stop operation temporarily, i.e., pause, or restart operation during playback and record mode. This is of a self-set and self-reset type. This terminal is reset when the mode is in fast-forward or fast-reverse and STOP and REC MUTE signals are in "L". In other conditions, this terminal can be reset or set. In auto-space operation, this terminal is command-signal input to release record-muting mode in case REC MUTE is in "H".
7.	FWD (INPUT)	Signal input to command the mechanism to playback the tape. This terminal becomes in record-mode command signal when this terminal is put into "L" together with REC-signal input at the same time.			

Terminal No.	Name	Function	Terminal No.	Name	Function
10.	REC (INPUT)	Signal input to command the set to become in record-monitor mode. This input is disabled when the set is in fast-forward or fast-reverse and STOP input is in "L".	18.	REC MUTE (OUTPUT)	Record mode: L Otherwise: H
11.	REC MUTE (INPUT)	Command-signal input to mute record signal and effective only in record and record pause modes. When this signal is in "L", pause operation is reset. Muting operation is maintained for four seconds after disappearance of this signal (auto-space operation). Auto-space operation is released on receipt of PAUSE input in "L" when this input is in "H".	19.	LINE MUTE (OUTPUT)	Puts out "H" signal in playback (▶, ◀ direction), record, record-monitor, record-pause and record-muting modes. Line muting is off with this signal in "H", Otherwise ; L.
12.	MODE (INPUT)	MODE select input Open: Relay style FWD direction L: Slide switch style FWD direction H: FWD/REV directions	20.	FAST-REVERSE MOTOR (OUTPUT)	Puts out "H" signal in fast-reverse (◀◀), auto-play AMS (▶+◀◀, ◀+◀◀) and rewind mode in AMS (▶+▶▶). Otherwise; L
13.	SHUT OFF (INPUT)	Input of tape-travel detection. Pulse signal is put into this terminal during forward, fast forward, rewind and record modes. In forward and record modes, the mechanism shuts off and becomes in stop mode in two seconds after the stoppage of tape travel, i.e., stop of pulse. In fast-forward and fast-reverse modes, the mechanism shuts off and becomes in stop mode one second after the stoppage of tape travel likewise.	21.	FWD MOTOR (OUTPUT)	Puts out "H" signal in playback (▶, ◀ direction), record, record-muting, FF, AMS (▶+▶▶, ◀+◀◀) modes and rewind mode in AMS (◀+◀◀). Otherwise; L
14.	COUNTER (INPUT)	Commanding-signal input to stop the mechanism or to put the set into forward mode during rewind mode. Forward mode is made when FAST-REVERSE and FORWARD switches are pressed at the same time. In other modes than rewind, this signal is not accepted. Also this signal is not accepted even in rewind mode when FAST-REVERSE switch is kept pressed. This terminal is not used on TC-78.	22.	PM2 (OUTPUT)	Puts out "H" signal in pause at FF (▶▶) and AMS modes. Momentarily puts out "H" signal in REV (◀) mode. Otherwise; L.
15.	TIMER (OUTPUT)	Puts out "L" signal for only 0.5 second after four-second resetting.	23.	PM1 (OUTPUT)	Puts out "H" signal in playback (▶, ◀ direction), record, record-muting modes. Momentarily puts out "H" signal in AMS mode. Otherwise; L.
16.	AMS (INPUT)	Signal input to put the set into AMS operation. AMS mode is made when this signal is in "L".	24.	REC LAMP (OUTPUT)	Puts out "H" signal in record, record-monitor, record-pause and record-muting modes. Otherwise; L.
17.	BIAS (OUTPUT)	Puts out "H" signal in record and record-muting modes. Otherwise; L	25.	PAUSE LAMP (OUTPUT)	Puts out "H" signal in pause mode. Puts out "H" and "L" signals alternately during record muting and during reset mode. in record-muting (Auto space)  more than four seconds  in reset 
			26.	FWD LAMP (OUTPUT)	Puts out "H" signal in FWD (▶ direction), forward pause, record, record-pause, auto play and AMS (▶+▶▶, ▶+◀◀ direction) modes. Otherwise; L
			27.	REVERSE LAMP (OUTPUT)	Puts out "H" signal in reverse playback (◀ direction), playback-pause and reverse AMS (◀+▶▶, ◀+◀◀ direction) modes. Otherwise; L
			28.	VDD	5V power source terminal

2. At ► (FWD) + ◀◀ (FAST-REVERSE)

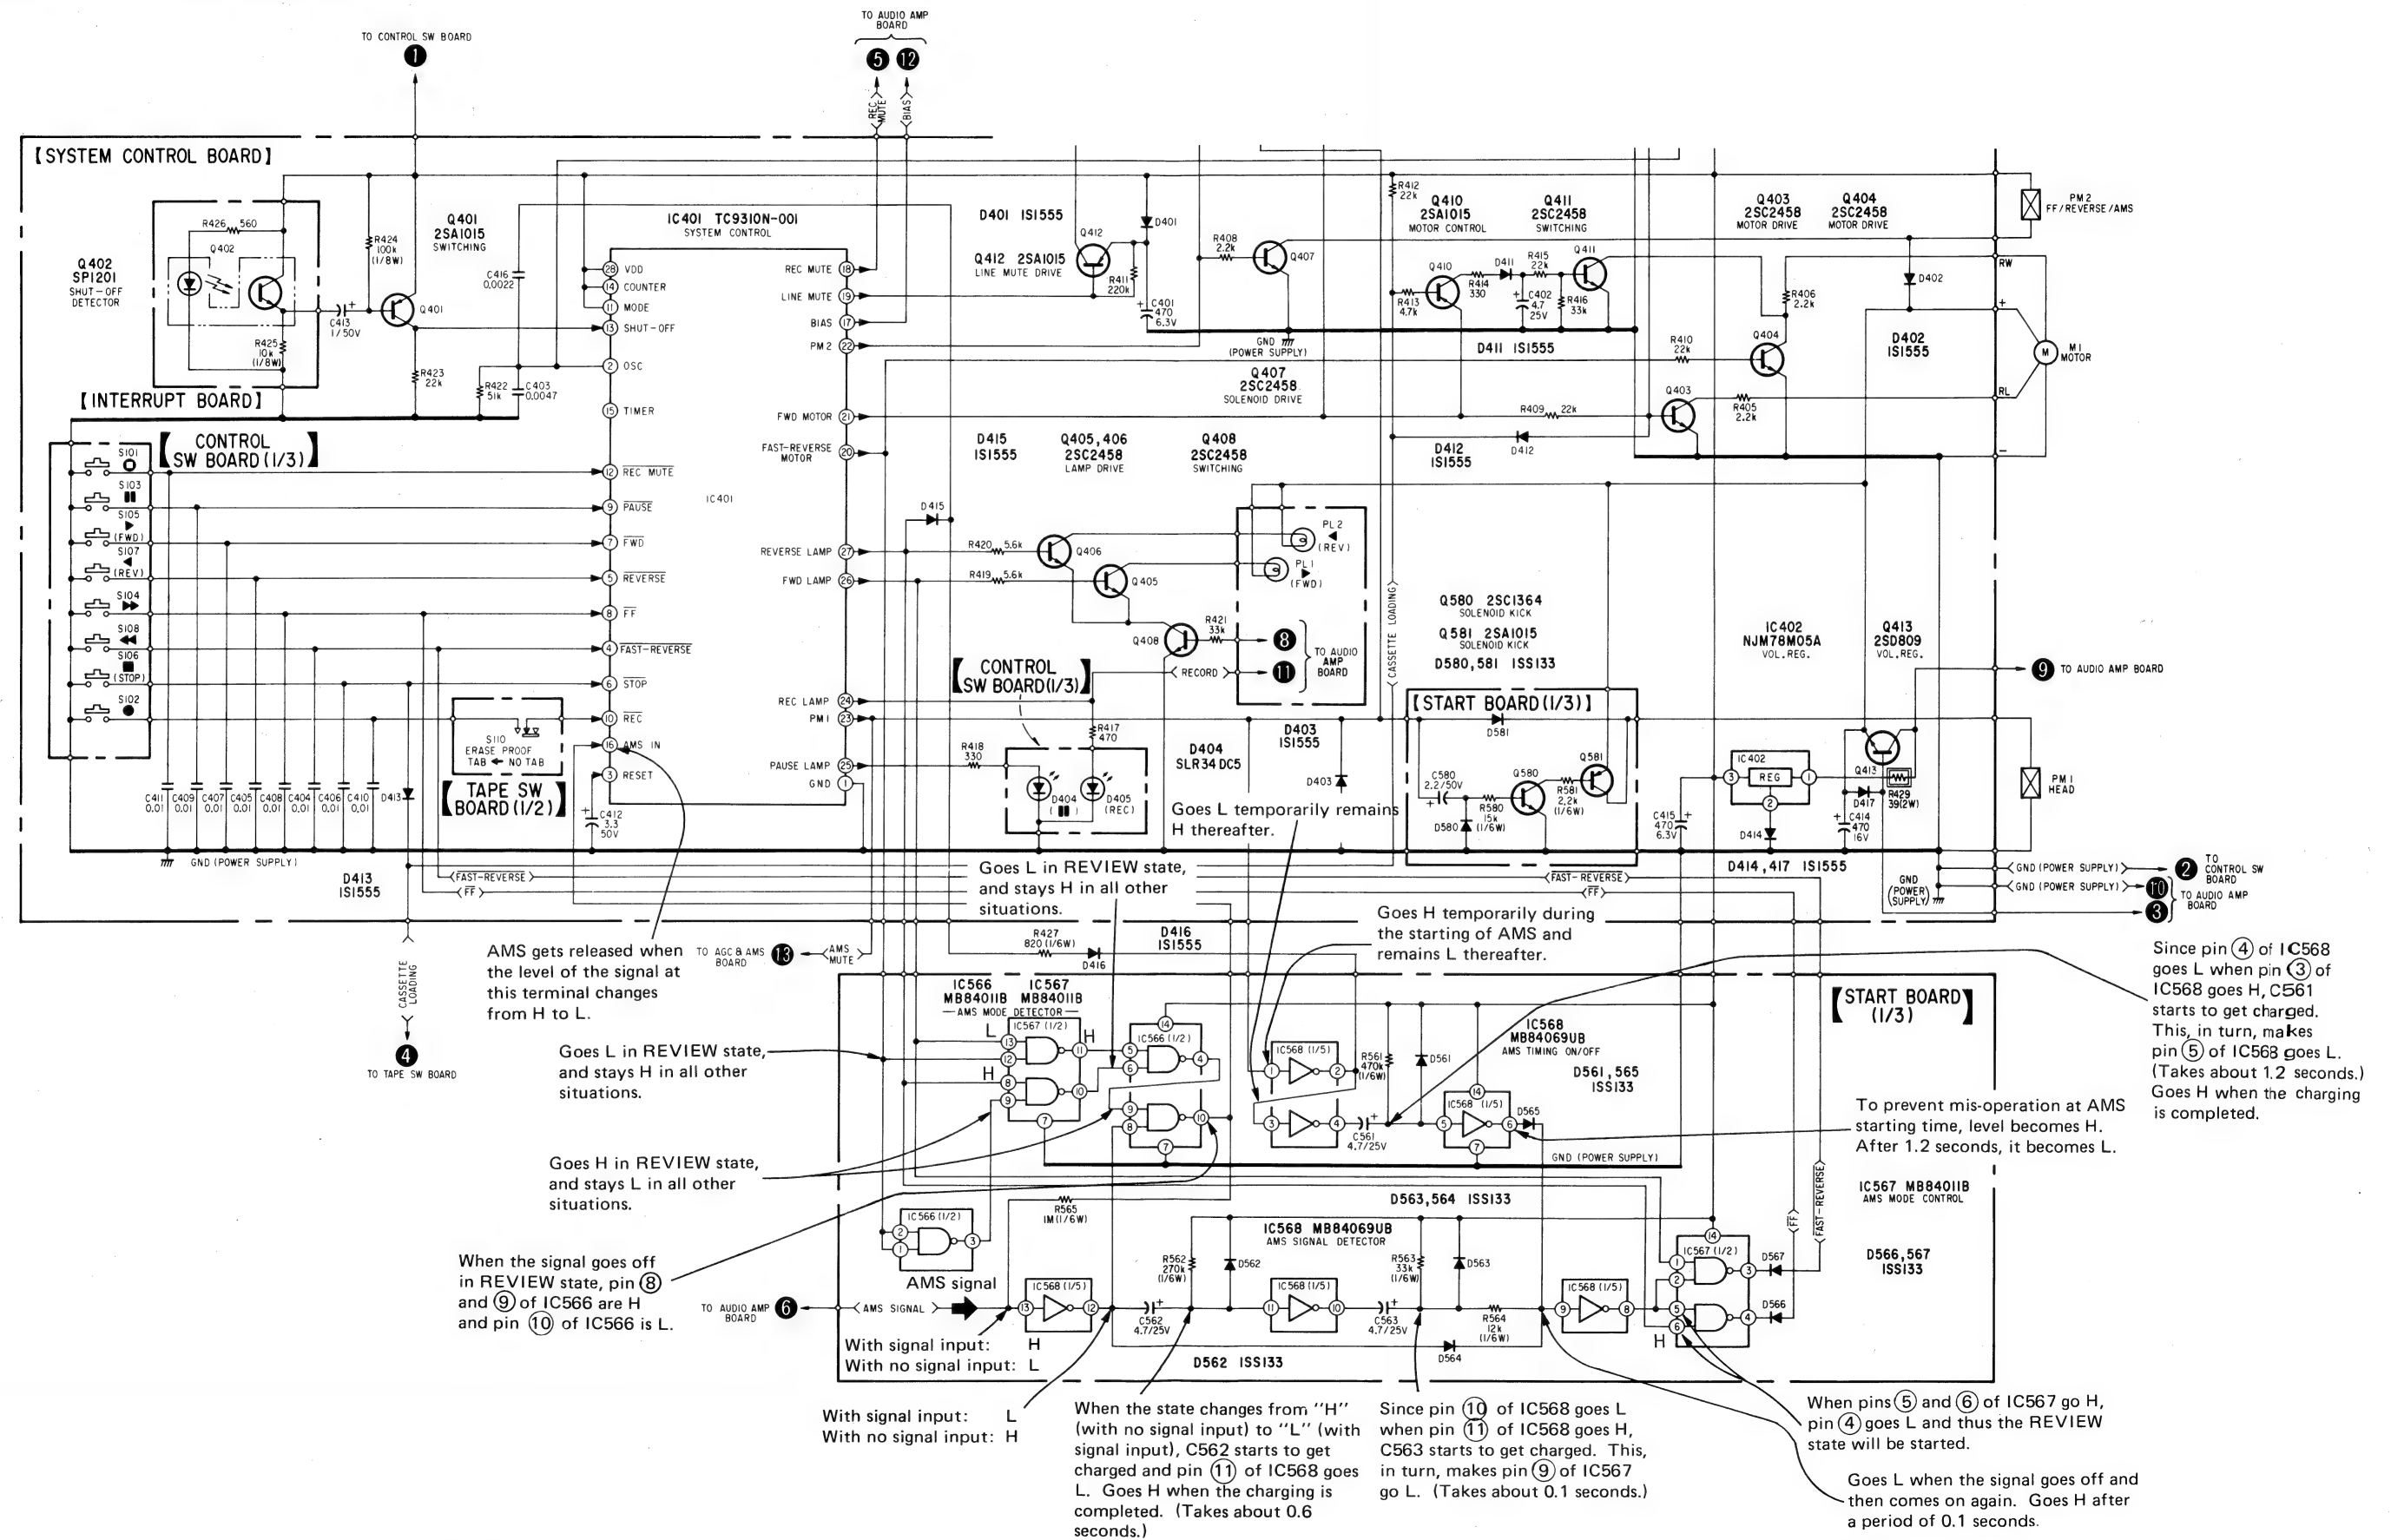

- AMS signal detection is the same as detection at
▶ (FWD) + ◀◀ (FAST-REVERSE) of FWD AMS mode.

2. At ◀ (REVERSE) + ◀◀ (FAST-REVERSE)

AMS signal detection is the same as detection at
▶ (FWD) + ▶▶ (FF) of FWD AMS mode.

1-3. IC585 and Q585

• Purpose

This circuitry is provided to stop the motor momentarily when the REVERSE (◀) button is depressed with the deck in the FF (▶▶) mode, and at the same time, also extend the cycle of the clock signal while the motor is stationary, in order to provide the correct timing for IC401.

• Function

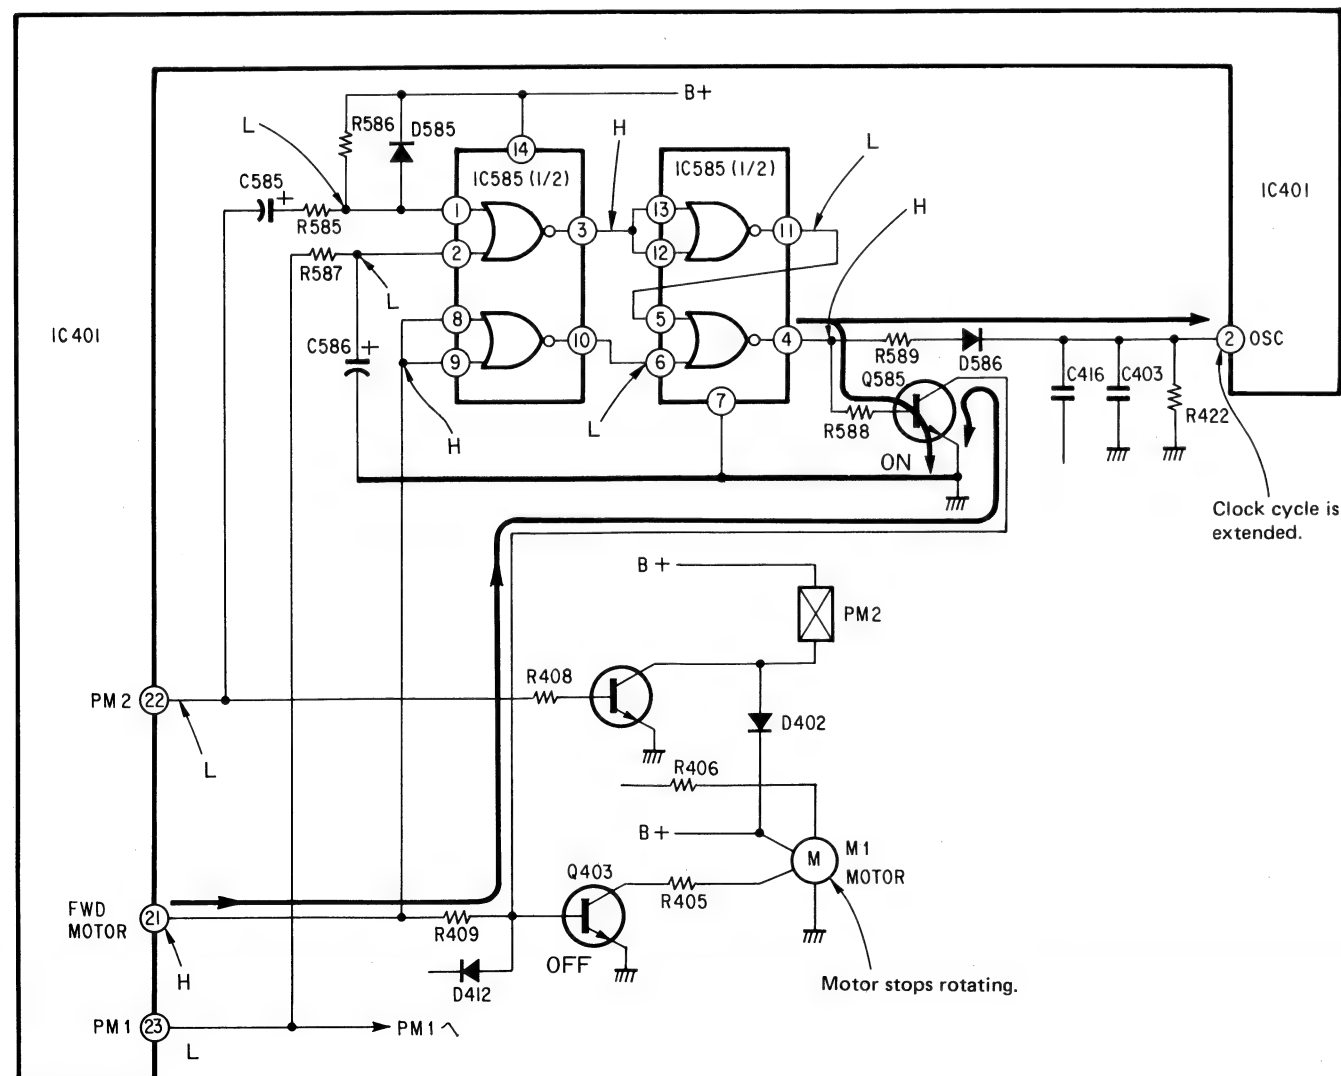

When the REVERSE (◀) button is depressed with the deck in the FF (▶▶) mode and the deck goes into the REV mode, terminal (21) of IC401 stays at 'H' and so the motor continues to turn.

When in the FF (▶▶) mode, there is a period of approximately two seconds from the time that the deck reaches the end of the tape to the time that it shuts off.

If the REVERSE (◀) button is depressed during this shutting off period, PM2 momentarily goes to 'L', however, the motor continues to turn and so the FR gear and the reel gear (take-up side)

stay engaged. In order to prevent this, Q585 goes ON when the REVERSE (◀) button is depressed to forcibly stop the motor and disengage the gears. In order to provide the proper timing for IC401, the clock cycle is extended by the time that the motor is stationary.

• IC401 timing when going from FF to REVERSE

1-4. Q410 and Q411

• Purpose

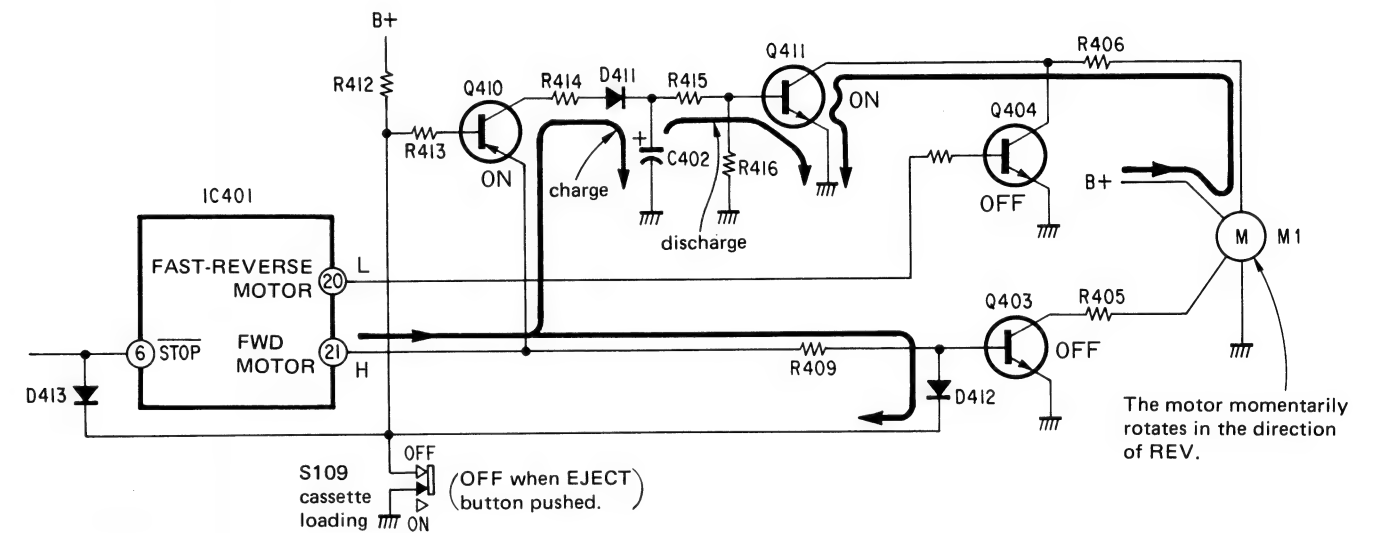

Q410 and Q411 are used to prevent the head from striking the cassette half when it opens and sustaining damage.

• Function

It requires approximately 0.8 seconds for the FWD cam gear to make one revolution when the FWD or REV buttons are depressed. If during this time the EJECT button is depressed, the head will rise up into the cassette housing cover as it opens and could sustain damage by striking the edge of the cassette half. Therefore, in order to prevent this, the moment that the EJECT button is depressed, the cathode of D412 is grounded to prevent the motor from turning

in the FWD direction; Q410 and Q411 go ON, to turn the motor in the REVERSE direction and turn the FWD cam gear in the reverse direction, and lower the head mounting base (R).

- Timing of IC401 when eject button is depressed
 - When EJECT button is depressed

1-5. C416

• Purpose

C416 is provided in order to lower the clock oscillation frequency of IC401 when the deck is in the REVERSE (◀) mode, to make the ON time of PM2 0.8 seconds (time required for the FF cam gear to turn one revolution).

• Function

When in the REVERSE (◀) mode, terminals (27) and (23) of IC401 go 'H' and current flows as shown in the illustration below; and this causes the resistance of D415 and D416 to come down. This then causes C416 to be connected in parallel with C403, and the clock oscillation frequency of IC401 becomes low.

SECTION 2

OPERATION DESCRIPTION

The mechanism of this deck provides selection of different modes by kicking the FWD cam gear and FF cam gear by the solenoid coils (PM1, PM2) to engage them with the drive gear (T) and turn.

The drive gear (T) is driven by the flywheel that is engaged with the pinion secured to the flywheel. The various different modes are described below.

2-1. Kicking function for FWD cam gear, FF cam gear when current is flowing through solenoid

The magnet is turned in a clockwise direction by the magnetic force generated by the solenoid coil. Since the magnet turns, the FWD cam gear and FF cam gear that are integrated with the magnet are kicked in the direction indicated by the arrow, to engage the drive gear (T).

When the drive gear (T) turns, the FWD cam gear and the FF cam gear turn one time, and the cutaway sections of these gear cause them to disengage from the drive gear (T).

KICK OPERATION OF CAM GEAR

TC-78

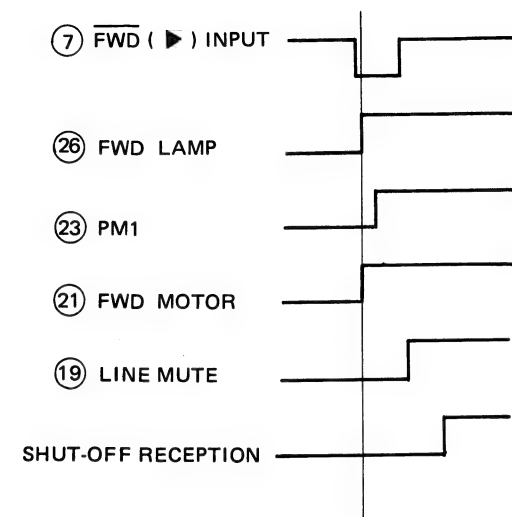

FF MODE

2-4. FWD MODE

• TIMING OF IC401

STOP → FWD

• MECHANISM OPERATION

FWD OPERATION (1)

② The FWD cam gear is shifted in the direction indicated by the arrow (refer to page TC-15) to engage the drive gear (T) and is then driven in the direction indicated by the arrow.

① Current flows through the solenoid coil, to generate magnetic force.

③ The FWD cam gear is driven by the drive gear (T), and the cam pushes down section (A) of the FWD lever to push the head chassis up in the direction indicated by the arrow.

FWD OPERATION (2)

④ The FWD selector lever (R) is pushed up in the direction indicated by the arrow by the FWD/REV switching lever which is integrated with the head chassis, and the FWD slider is also pushed out in the direction indicated by the arrow.

⑤ The rotating head gear turns in the direction indicated by the arrow by the shifting of the FWD slider, and the record/playback head moves to the FWD position.

FWD OPERATION (3)

⑩ This is pushed up in the direction indicated by the arrow by compression spring located beneath the reel turntable magnet.

⑪ The reel table magnet engages the drive gear (T), and turns in the direction indicated by the arrow.

⑦ The FWD lock lever is pulled in the direction indicated by the arrow by the tension of the spring, and attracted by the magnetic force of PM1.

⑥ Operates simultaneously with Function ④. The pin that is integrated with the head chassis is shifted by ③ in the direction indicated by the arrow, to release the FWD lock lever.

⑨ Operates simultaneously with Function ④.

When the head chassis is pushed up by Function ③, the take-up selection lever is pushed in the direction indicated by the arrow, to carry out functions (a), (b), and (c) in that order, and the take-up gear retainer rises.

⑧ The FWD lock lever is supported by the section indicated by an asterisk (*) by Function ⑦. Therefore, the head chassis rises.

FWD OPERATION (4)

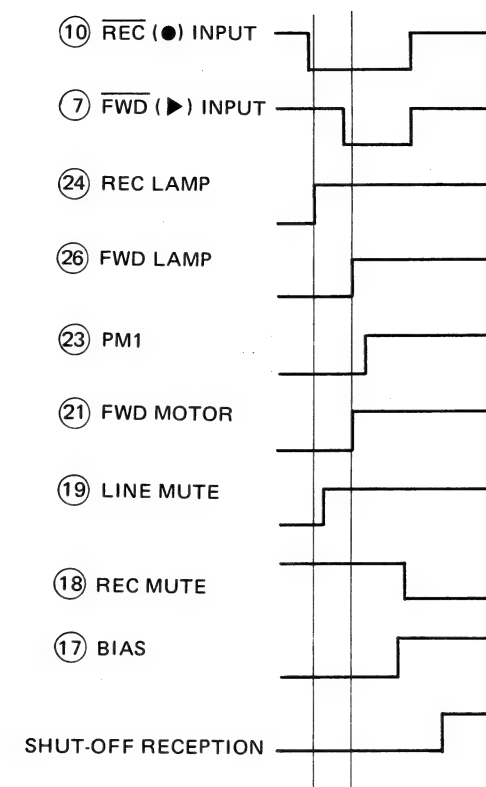

⑫ Operates simultaneously with Function ⑤. The shifting of the FWD slider in the direction of the arrow by Function ④ serves to make the pinch roller (N) turn in the direction of the arrow by the tension of the spring, and be pressed against the capstan.

2-5. REC/FWD MODE

SECTION 5 ADJUSTMENTS

5-1. MECHANICAL ADJUSTMENTS

PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

record/playback head	pinch roller
erase head	rubber belts
capstan	idlers
2. Demagnetize the record/playback head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed with the rated power supply voltage (dc 2.5V) unless otherwise noted.

Torque Measurement

Torque	Torque meter	Meter reading
FWD	CQ-102C	28 – 60 g·cm (0.39 – 0.83 oz·inch)
FWD Back tension	CQ-102C	2 – 8 g·cm (0.03 – 0.1 oz·inch)
REV	CQ-102R	28 – 60 g·cm (0.39 – 0.83 oz·inch)
REV Back tension	CQ-102R	2 – 8 g·cm (0.03 – 0.1 oz·inch)
FF, REW	CQ-201B	80 – 165 g·cm (1.1 – 2.28 oz·inch)

Tape Speed Adjustment

Setting:

Adjustment Location: audio board

RV102 RV202
(L-CH) (R-CH)

record level adjustment

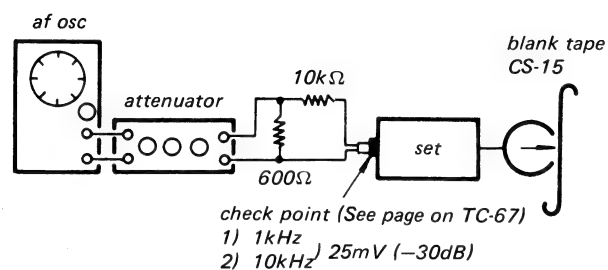

Record Bias Adjustment

Setting:

DOLBY NR switch: OFF
TAPE SELECTOR switch: AUTO
ISS switch: 1

Procedure:

1. Mode: record

2. Mode: playback

Adjust CT101 (L-CH), CT201 (R-CH) so that the measurement point level of 10kHz signal in 0dB relative to that of 1kHz.

Adjustment Location: audio board

Record Bias adjustment

CT101 (L-CH)
CT201 (R-CH)

Record Level Adjustment

Setting:

DOLBY NR switch: OFF
TAPE SELECTOR switch: AUTO
ISS switch: 1

Procedure:

1. Mode: record

2. Mode: record

3. Mode: playback

4. Adjust RV102 (L-CH) and RV202 (R-CH) so that playback output level of step 3 is 0 ±0.5dB relative to that of step 1.

Adjustment Location: audio board

RV102 (L-CH)
RV202 (R-CH)
record level adjustment

Reverse Playback Head Azimuth Adjustment

Procedure:

1. Mode: record

2. Mode: reverse playback

3. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5dB.

4. Phase Check

Mode: reverse playback

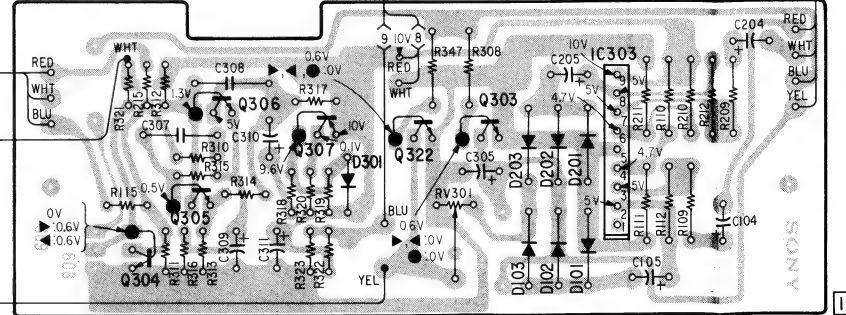

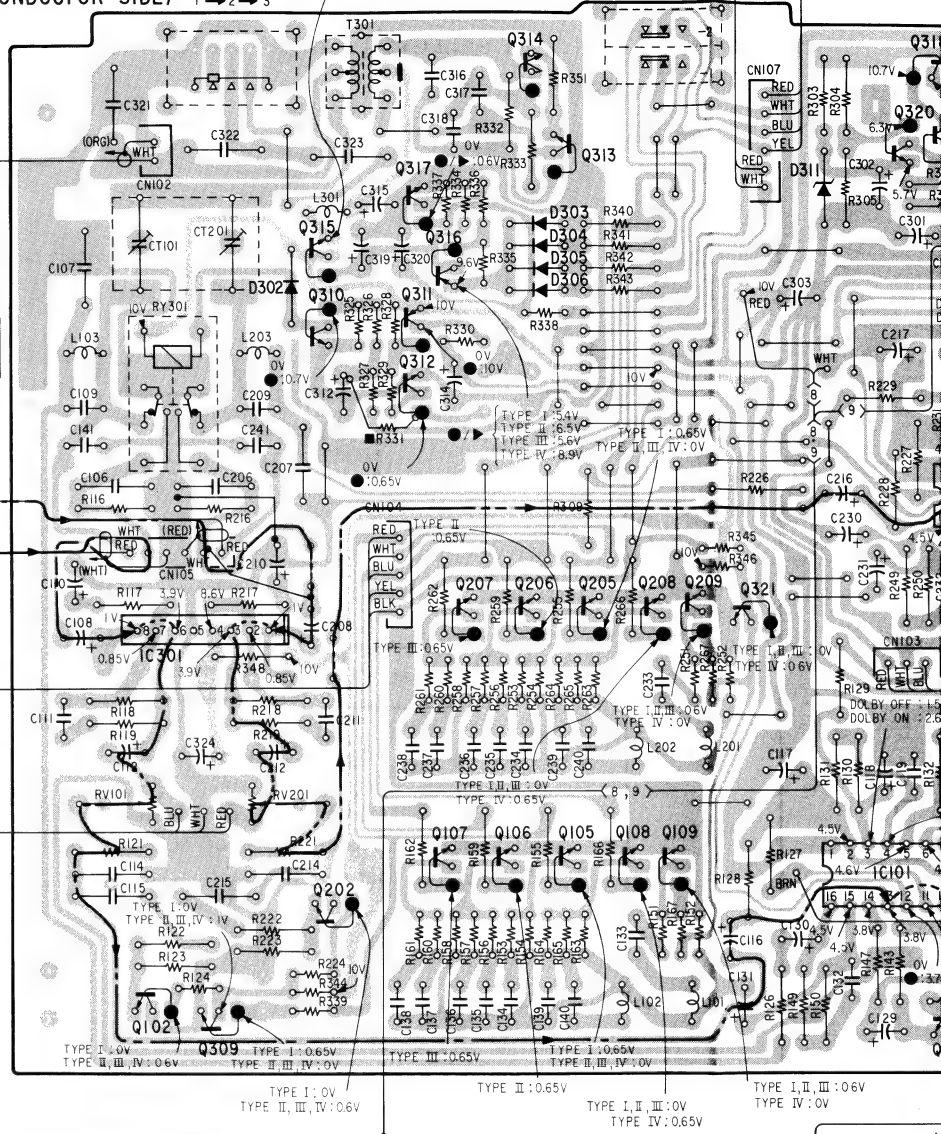

5. After the adjustment, lock the screws with locking compound.

Adjustment Location:

Adjustment screw

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (▲-▲▲-▲▲-XX or ▲-▲▲-▲▲-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF . Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF: μF , PF: μpF .

RESISTORS:

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F: nonflammable

COILS

- MMH: mH, UH: μH

SEMICONDUCTORS

- In each case, U: μ , for example: UA: μA , UPA: μPA , UPC: μPC , UPD: μPD .

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "♣" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF . Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF: μF , PF: μF .

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

SEMICONDUCTORS

- In each case, U : μ , for example:
UA...: μA ..., UPA...: μPA ..., UPC...: μPC ,
UPD...: μPD ...

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μ F. Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF: μ F, PF: μ F.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μ H

SEMICONDUCTORS

- In each case, U : μ , for example:
UA...: μ A..., UPA...: μ PA..., UPC...: μ PC,
UPD...: μ PD...

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "●" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F: nonflammable

COILS

- MMH: mH, UH: μH

SEMICONDUCTORS

- In each case, U: μ, for example:
UA...: μA..., UPA...: μPA..., UPC...: μPC,
UPD...: μPD...

Subject: System control board change

TC-78C:

US Model
Canadian Model

TC-78:

AEP Model
UK Model
E Model

No. 4

December, 1983

Because of system control board change, the new mounting diagram has been issued. As to the schematic diagram, refer to the service manual (Supplement No. 3) using TC9310N-024 for system control IC.

Besides, be careful of the difference of reference numbers (Q403, Q404, R405, R406) between the former type and the new type.

SYSTEM CONTROL CIRCUIT AND MECHANISM CHANGE

- Applicable Serial No.:

AF Model: 503,301 and later
UK Model: 609,501 and later
E1 Model: 322,901 and later
E2 Model: 405,401 and later

- System control circuit and board have been changed.
- Tape transport mechanism type has been changed.

- Owing to these changes, pause mechanism can be operated when tape is played back even in reverse mode.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "♣" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

SEMICONDUCTORS

- In each case, U : μ, for example:
UA.... : μA...., UPA.... : μPA...., UPC.... : μPC,
UPD.... : μPD....

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " * " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF:μF, PF:μF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

SEMICONDUCTORS

- In each case, U : μ, for example:
UA...: μA..., UPA...: μPA..., UPC...: μPC,
UPD...: μPD...

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF . Common capacitors are omitted. Refer to the following lists for their part numbers.
- MF: μF , PF: μF .

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F: nonflammable

COILS

- MMH: mH, UH: μH

The components identified by shading and mark ▲ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS

In each case, U: μ , for example:
 UA...: μA ..., UPA...: μPA ..., UPC...: μPC ,
 UPD...: μPD ...
